Field Methods and Post-Excavation Techniques in Late Antique Archaeology, 2016-04-26 Archaeologists working on late antique sites have not spent enough time thinking about methodology Their focus has been on recovering and cataloguing evidence or on the study of specific historical problems Digging has often been more important than publishing which has rarely extended beyond the basic summaries found in preliminary reports The re emergence of clearance excavation fuelled by the demands of tourism has further reduced the value of urban excavations in the East Mediterranean Here late antique levels have suffered in the hunt for photogenic early imperial architecture This volume attempts to address this situation by offering a critique of present practice and a series of exemplars alongside discussion articles on field technique and post excavation analysis The articles ranges from urban survey to the study of finds The book also considers if we need to develop specific field methods appropriate to the study of late antiquity Contributors are John Bintliff Jeremy Evans Axel Gering Stefan Groh Yoshiki Hori Nikolaos D Karydis Veli K se Luke Lavan Zsolt Magyar Philip Mills John Pearce Steve Roskams Helga Sedlmayer Ellen Swift Itamar Taxel Douglas Underwood Lutgarde Vandeput and Joe Williams

Knowledge-Based Intelligent Information and Engineering Systems Bruno Apolloni,2007-09-14 Annotation The three volume set LNAI 4692 LNAI 4693 and LNAI 4694 constitute the refereed proceedings of the 11th International Conference on Knowledge Based Intelligent Information and Engineering Systems KES 2007 held in Vietri sul Mare Italy September 12 14 2007 The 409 revised papers presented were carefully reviewed and selected from about 1203 submissions The papers present a wealth of original research results from the field of intelligent information processing in the broadest sense topics covered in the first volume are artificial neural networks and connectionists systems fuzzy and neuro fuzzy systems evolutionary computation machine learning and classical AI agent systems knowledge based and expert systems hybrid intelligent systems miscellaneous intelligent algorithms intelligent vision and image processing knowledge management and ontologies Web intelligence multimedia e learning and teaching intelligent signal processing control and robotics other intelligent systems applications papers of the experience management and engineering workshop industrial applications of intelligent systems as well as information engineering and applications in ubiquitous computing environments **Rigorous Numerics in Dynamics** Jan Bouwe van den Berg,Jean-Philippe Lessard,2018-07-12 This volume is based on lectures delivered at the 2016 AMS Short Course Rigorous Numerics in Dynamics held January 4 5 2016 in Seattle Washington Nonlinear dynamics shapes the world around us from the harmonious movements of celestial bodies via the swirling motions in fluid flows to the complicated biochemistry in the living cell Mathematically these phenomena are modeled by nonlinear dynamical systems in the form of ODEs PDEs and delay equations The presence of nonlinearities complicates the analysis and the difficulties are even greater for PDEs and delay equations which are naturally defined on infinite dimensional function spaces With the availability of powerful computers and sophisticated software numerical simulations have quickly become the primary tool to study the models However while the pace of progress increases one may ask just how reliable are our computations Even for finite dimensional ODEs this question naturally arises if the system under study is chaotic as small differences in initial conditions such as those due to rounding errors in numerical computations yield wildly diverging outcomes These issues have motivated the development of the field of rigorous numerics in dynamics which draws inspiration from ideas in scientific computing numerical analysis and approximation theory The articles included in this volume present novel techniques for the rigorous study of the dynamics of maps via the Conley index theory periodic orbits of delay differential equations via continuation methods invariant manifolds and connecting orbits the dynamics of models with unknown nonlinearities and bifurcations diagrams **Nuclear Science Abstracts** ,1964 Introduction to the Simulation of Dynamics Using Simulink Michael A. Gray,2010-07-02 Designed for undergraduate students in the general science

engineering and mathematics community Introduction to the Simulation of Dynamics Using Simulink R shows how to use the powerful tool of Simulink to investigate and form intuitions about the behavior of dynamical systems Requiring no prior programming experience it clearly explains how to transition from physical models described by mathematical equations directly to executable Simulink simulations Teaches students how to model and explore the dynamics of systems Step by step the author presents the basics of building a simulation in Simulink He begins with finite difference equations and simple discrete models such as annual population models to introduce the concept of state The text then covers ordinary differential equations numerical integration algorithms and time step simulation The final chapter offers overviews of some advanced topics including the simulation of chaotic dynamics and partial differential equations A one semester undergraduate course on simulation Written in an informal accessible style this guide includes many diagrams and graphics as well as exercises embedded within the text It also draws on numerous examples from the science engineering and technology fields The book deepens students understanding of simulated systems and prepares them for advanced and specialized studies in simulation

Integrated Fault Seal Analysis S. Ogilvie, S. Dee, R.W. Wilson, W. Bailey, 2020-08-03 Faults commonly trap fluids such as hydrocarbons and water and therefore are of economic significance During hydrocarbon field development smaller faults can provide baffles and or conduits to flow There are relatively simple well established workflows to carry out a fault seal analysis for siliciclastic rocks based primarily on clay content There are however outstanding challenges related to other rock types to calibrating fault seal models with static and dynamic data and to handling uncertainty The variety of studies presented here demonstrate the types of data required and workflows followed in today s environment in order to understand the uncertainties risks and upsides associated with fault related fluid flow These studies span all parts of the hydrocarbon value chain from exploration to production but are also of relevance for other industries such as radioactive waste and CO2 containment

PC Magazine ,1986 **Groups and Symmetries** John P. Harnad, Pavel Winternitz, **Risk in Children's Adventure Literature** Elly McCausland, 2024-05-31 Risk in Children s Adventure Literature examines the way in which adults discuss the reading and entertainment habits of children and with it the assumption that adventure is a timeless and stable constant whose meaning and value is self evident A closer enquiry into British and American adventure texts for children over the past 150 years reveals a host of complexities occluded by the term and the ways in which adults invoke adventure as a means of attempting to get to grips with the nebulous figure of the child Writing about adventure also necessitates writing about risk and this book argues that adults have historically used adventure to conceptualise the relationship between children and risk the risks children themselves pose to society the risks that threaten their development and how they can be trained to manage risk in socially normative and desirable ways Tracing this tendency back to its development and consolidation in Victorian imperial romance and

forward through various adventure texts and media to the present day this book probes and investigates the truisms and assumptions that underlie our generalisations about children s love for adventure and how they have evolved since the mid nineteenth century **Context-sensitive Pointer Analysis Using Binary Decision Diagrams** John Whaley,2007
