1. The sizes, in square feet, of the 20 rooms in a student residence hall at a certain university are summarized in the following histogram.

- (a) Based on the histogram, write a few sentences describing the distribution of room size in the residence hall.
 (b) Summary statistics for the sizes are given in the following table.

Mean	Standard Deviation	Min	Q1	Median	Q3	Max
231.4	68.12	134	174	253.5	292	315

- ① The spread is about $(350 - 100) = 250 \text{ ft}^2$.
 The distribution is roughly bimodal and approximately symmetric. The median is around 250. The min is around 100 and the max is around 350.
- ② $IQR = 292 - 134 = 118$
 No outliers
- Upper bound = $Q_3 + 1.5 \times IQR = 292 + 1.5 \times 118 = 467$
 Lower bound = $Q_1 - 1.5 \times IQR = 134 - 1.5 \times 118 = -3$

Mathematics in Grades 6 - 12 Randall E. Groth, 2012-08-10 A journey into the vibrant and intriguing world of mathematics education Teaching Mathematics in Grades 6 12 explores how research in mathematics education can inform teaching practice in grades 6 12 The author shows secondary mathematics teachers the value of being a researcher in the classroom by constantly experimenting with methods for developing students mathematical thinking and then connecting this research to practices that enhance students understanding of the material The chapters in Part I introduce secondary teachers to the

field of mathematics education with cross cutting issues that apply to teaching and learning in all mathematics content areas The chapters in Part II are devoted to specific mathematics content strands and describe how students think about mathematical concepts The goal of the text is to have secondary math teachers gain a deeper understanding of the types of mathematical knowledge their students bring to grade 6 12 classrooms and how students thinking may develop in response to different teaching strategies

your learning progress THE EDUCATION AND DECONSTRUCTION OF MR. BLOOMBERG Sally A. Friedman, 2010-07-12

This is an expos detailing New York City Mayor Michael Bloomberg's education and construction policies between 2002 and 2009 inclusive. It covers all major education issues: schools, chancellor, school budget, grading of the schools, reducing class sizes, small charter and culturally themed schools, standardized testing, school safety, overcrowding, and mayoral control; and all major real estate development issues: rezoning, ULURP, self-certification, various fatal construction accidents and disasters, affordable housing, lack of construction law enforcement, and the large projects that characterized the administration. This book features a list of abbreviations and a comprehensive index in the back. A page of the Introduction, p. 11, is crucial for understanding references made throughout the book. Therefore, it is reproduced below.

Making himself available to parents: The mayor performed the important tasks of negotiating with the unions, securing funding from the higher powers, and making public relations appearances when there was good news to report. I have observed that there were three recurring themes in Mr. Bloomberg's modus operandi in both Education and Real Estate Development.

Theme 1: He was overly optimistic. As his various education initiatives and construction projects progressed, he routinely threw around and changed numbers on standardized test scores, graduation rates, school openings, school crime rates, construction costs, creation of jobs, and affordable housing units, among others, and sometimes even distorted facts outright.

Theme 2: Time after time, Mr. Bloomberg asked for input from the community or purported to on new school openings and on construction of schools and other projects, but usually ended up hiring his cronies and ignored the community's wishes.

Theme 3: He took advantage of legal loopholes or skirted around the law to forge ahead with his agenda. His agenda was to acquire power. Why else did he take control of the schools and overturn term limits? It was not for the money. In November 2009, Mr. Bloomberg won his third term election, bid by a narrow margin, mostly because he was still viewed as a stronger candidate than the opposing one. His power and popularity were waning, however, rocked by various investigations in recent years, including a slush fund scandal and corruption and sloppiness in construction that led to fatal accidents that resulted in the termination of decades-long unethical practices. Further, he was accused of being involved in various conflicts of interest and of being hypocritical on environmental and health issues.

Two farmyard clichés and one generic cliché also aptly describe many occurrences during the Bloomberg administration between 2002 and 2009.

Cliché 1: Just another case of the fox guarding the henhouse.

Cliché 2: Closing the barn door after the horses have already fled.

Cliché 3: Do as I say, not as I do.

The above themes and clichés are so common in my text that I refer to their generic names, i.e., I will use the blog style, for example, "File under Theme 1" or "File under Cliché 2" when providing evidence of same.

The application and interpretation of statistics are central to

ecological study and practice Ecologists are now asking more sophisticated questions than in the past These new questions together with the continued growth of computing power and the availability of new software have created a new generation of statistical techniques These have resulted in major recent developments in both our understanding and practice of ecological statistics This novel book synthesizes a number of these changes addressing key approaches and issues that tend to be overlooked in other books such as missing censored data correlation structure of data heterogeneous data and complex causal relationships These issues characterize a large proportion of ecological data but most ecologists training in traditional statistics simply does not provide them with adequate preparation to handle the associated challenges Uniquely Ecological Statistics highlights the underlying links among many statistical approaches that attempt to tackle these issues In particular it gives readers an introduction to approaches to inference likelihoods generalized linear mixed models spatially or phylogenetically structured data and data synthesis with a strong emphasis on conceptual understanding and subsequent application to data analysis Written by a team of practicing ecologists mathematical explanations have been kept to the minimum necessary This user friendly textbook will be suitable for graduate students researchers and practitioners in the fields of ecology evolution environmental studies and computational biology who are interested in updating their statistical tool kits A companion web site provides example data sets and commented code in the R language
