

As the title suggests, a
batter requires 7 parts flour,
3 parts water, 2 parts
sugar, and 1 part butter

Flour: $39 \times 7 = 273$ cups

Water: $39 \times 3 = 117$ cups

Sugar: $39 \times 2 = 78$ cups

Butter: $39 \times 1 = 39$ cups

The Skyrme Model Vladimir G. Makhankov, Yurii P. Rybakov, Valerii I. Sanyuk, 2012-12-06 The December 1988 issue of the International Journal of Modern Physics A is dedicated to the memory of Tony Hilton Royle Skyrme It contains an informative account of his life by Dalitz and Aitchison s reconstruction of a talk by Skyrme on the origin of the Skyrme model From these pages we learn that Tony Skyrme was born in England in December 1922 He grew up in that country during a period of increasing economic and political turbulence in Europe and elsewhere In 1943 after Cambridge he joined the British war effort in making the atomic bomb He was associated with military projects throughout the war years and began his career as an academic theoretical physicist only in 1946 During 1946 61 he was associated with Cambridge Birmingham and Harwell and was engaged in wide ranging investigations in nuclear physics It was this research which eventually culminated in his studies of nonlinear field theories and his remarkable proposals for the description of the nucleon as a chiral soliton In his talk Skyrme described the reasons behind his extraordinary suggestions which when first made must have seemed bizarre According to him ideas of this sort go back many decades and occur in the work of Sir William Thomson who later became Lord Kelvin Skyrme had heard of Kelvin in his youth

Statistical Dynamics: A Stochastic Approach To Nonequilibrium Thermodynamics (2nd Edition) Streater Ray F, 2009-03-23 How can one construct dynamical systems obeying the first and second laws of thermodynamics mean energy is conserved and entropy increases with time This book answers the question for classical probability Part I and quantum probability Part II A novel feature is the introduction of heat particles which supply thermal noise and represent the kinetic energy of the molecules When applied to chemical reactions the theory leads to the usual nonlinear reaction diffusion equations as well as modifications of them These can exhibit oscillations or can converge to equilibrium In this second edition the text is simplified in parts and the bibliography has been expanded The main difference is the addition of two new chapters in the first classical fluid dynamics is introduced A lattice model is developed which in the continuum limit gives us the Euler equations The five Navier Stokes equations are also presented modified by a diffusion term in the continuity equation The second addition is in the last chapter which now includes estimation theory both classical and quantum using information geometry
