Michiel Hazewinkel

Algebra 2 Unit 10 Conic Sections Unit Notes Packet:

Encyclopaedia of Mathematics Michiel Hazewinkel, 2012-12-06 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics. It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985. The annotated translation consists of ten volumes including a special index volume. There are three kinds of articles in this ENCYCLOPAEDIA. First of all, there are survey-type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up-to-date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole, these articles should be understandable to mathematics students in their first specialization years, to graduates from other mathematical areas, and depending on the specific subject, to specialists in other domains of science, engineers, and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems, techniques, and concepts involved in the area in question. They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions. The second kind of article, of medium length, contains more detailed concrete problems, results, and techniques.

The Software Encyclopedia, 1988 *Mathematical Reviews*, 1998 **Reviews in Number Theory, 1984-96**, 1997
These six volumes include approximately 20,000 reviews of items in number theory that appeared in *Mathematical Reviews* (MR) between 1984 and 1996. This is the third such set of volumes in number theory; the first was edited by W. J. LeVeque and included reviews from 1940-1972; the second was edited by R. K. Guy and appeared in 1984. **The Compact Edition of the Oxford English Dictionary** Sir James Augustus Henry Murray, 1971. Micrographic reproduction of the 13-volume Oxford English dictionary published in 1933. **Conic Sections in Context [Lesson Plan]** Elizabeth Richardson, 2011. This project is a discovery-based multi-sensory unit composed of a series of lessons designed to teach high school students about conic sections. This four-week unit focuses on developing students' abilities to identify and/or create mathematical rules from tangible patterns, applications of conic sections. Its primary purpose is to examine conic sections and create connections between the geometric and algebraic definitions. As well, this unit is designed to challenge students to discover modern-day activities of this unit include computer-based explorations of conic sections, discussions of the etymology of each conic section, construction of each conic section using rope and sidewalk chalk, discovery of the standard formula for each conic section, and individual and group presentations on artistic creations and modern-day applications of conic sections. This unit is designed to be presented in the second semester of an Algebra II course. Throughout this unit, students work in a number of environments to meet the need of each learning style. As well, students reflect daily in the form of a minute paper. These daily reflections facilitate an ongoing assessment of classroom dynamics. Having been implemented at Los Alamos High School in

March of 2011 assessment of student success and unit plan effectiveness included samples of students work comparison of students pretest post test results and a review of student and colleague reflections personal progress analysis and unit evaluation surveys Overall assessment data supports the conclusion that this unit successfully fulfilled the target goals In addition assessment data suggests the following revisions of the plan starting the unit with a webquest to establish relevancy reorganizing the unit to address one conic section each lesson using a variety of approaches and differentiating assessment

Algebra II Instructional Fair (Firm),2002-05 Algebra II links all the activities to the NCTM Standards and provides students with practice in the skill areas necessary to master the concepts presented in a second level course in Algebra
