

# Analysis of a Squirrel Gene Pool

**Objectives:** Using electrophoresis results, a student population of 20000 students will be divided into 1000 groups of 200 students each. Each group will be assigned a unique number (1-20000) and will be responsible for analyzing the electrophoresis results of 200 students. The results of the electrophoresis will be used to determine the frequency of each allele in the population. The results of the electrophoresis will be used to determine the frequency of each allele in the population. The results of the electrophoresis will be used to determine the frequency of each allele in the population.

1. The following table shows the results of the electrophoresis for the 20000 students.
