

3 CELLS AND TISSUES

The basic unit of structure and function in the human body is the cell. Each of a cell's parts, or organelles, as well as the entire cell, is organized to perform a specific function. Cells have the ability to metabolize, grow and reproduce, move, and respond to stimuli. The cells of the body differ in shape, size, and in specific roles in the body. Cells that are similar in structure and function form tissues, which, in turn, construct the various body organs.

Student activities in this chapter include questions relating to the structure and function of the generalized animal cell and to the general arrangement of tissues and their contribution to the activities of the various body organs.

estimate ar and arma models matlab simulink mathworks - Jan 31 2023

web the ar model contains a single polynomial a that operates on the measured output for a single output signal y_t the ar model is given by the following equation $a(q)y_t = e_t$ the arma model adds a second polynomial
