

The Digestive System

What is the digestive system?

The digestive system, or **gastrointestinal tract**, is a tract of organs that is responsible for digesting and absorbing nutrients from food. Food enters through the mouth, is broken down in the stomach, and then moves through the small intestine, where nutrients are absorbed. The remaining waste is then eliminated through the large intestine and rectum.

Liver, pancreas & gallbladder

After leaving the stomach, chyme moves into the duodenum, the first part of the small intestine, where it is mixed with bile secreted by the **liver** and pancreatic juice secreted by the **pancreas**. This area is a mixing region on the intestine where the duodenum opens into the descending large intestine. Bile from the liver, secreted into the duodenum, helps to break down fats in the **gallbladder**.

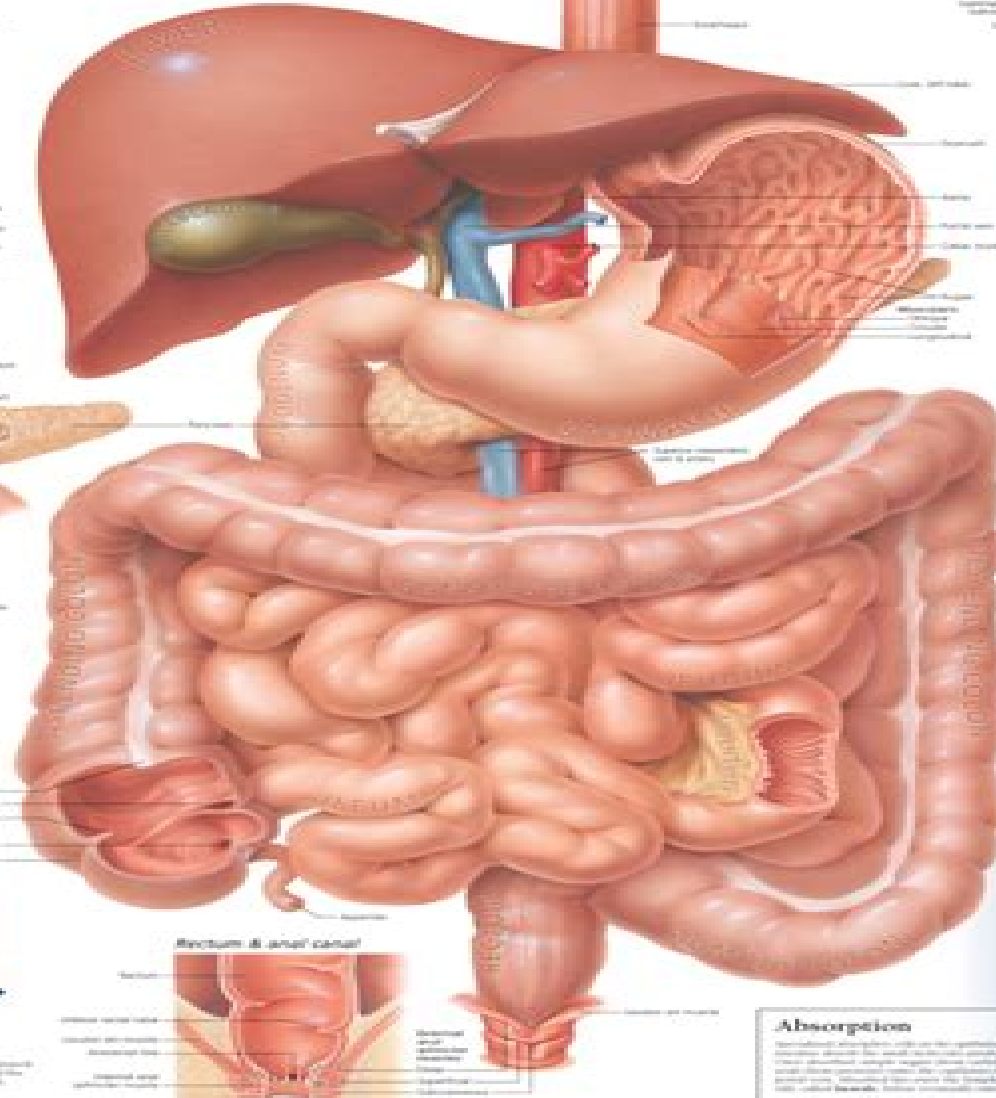

Large intestine
The large intestine consists of the cecum, the appendix, ascending colon, transverse colon, descending colon, sigmoid colon, and rectum. It is responsible for absorbing water and electrolytes from the remaining indigestible food matter, thereby forming feces.

Peristaltic action

Food material is pushed through the digestive system by a series of powerful muscular contractions called peristalsis. These contractions move the material forward and the wave which, when it moves, the material is pushed forward.

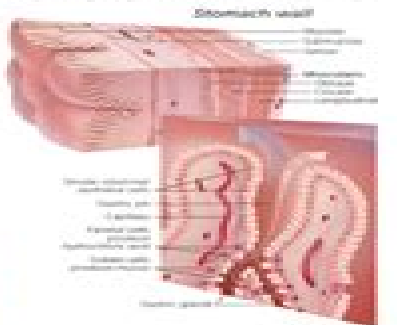

The mouth & salivary glands

Chewing the food breaks it into smaller pieces, making it easier to swallow. Saliva, secreted by the salivary glands, contains the enzyme amylase, which begins the digestion of carbohydrates. Saliva also moistens the food, making it easier to swallow. The salivary glands are located in the mouth and throat.

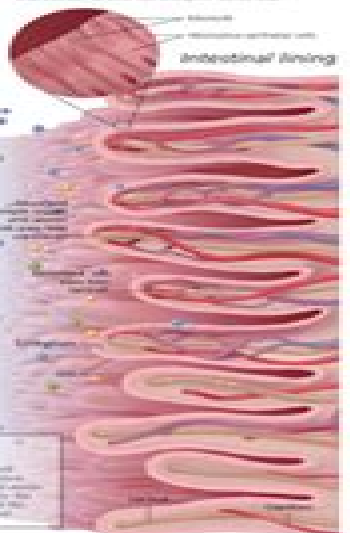

The stomach

The stomach is a large, muscular organ that is responsible for breaking down food into smaller pieces. It is located in the upper left part of the abdomen. The stomach wall is composed of several layers of muscle, which contract to mix food with gastric juices.

Small intestine

The small intestine is a long, coiled tube that is responsible for absorbing nutrients from the food. It is located in the lower right part of the abdomen. The small intestine is divided into three parts: the duodenum, jejunum, and ileum.

Absorption

The process of absorption involves the movement of nutrients from the small intestine into the bloodstream. This process occurs through the villi, which are small, finger-like projections that increase the surface area of the small intestine.
