

Unit 1: Analytic Geometry in Calculus

Summary

Analytic geometry is a branch of mathematics that enables us to see the relationships between geometrical shapes and their mathematical representations, using coordinate systems. We begin Lesson 1.1 by considering the familiar—the Cartesian coordinate system—which describes space using a two-dimensional, rectangular coordinate system. Here, we examine how curves within the plane can be represented using parametric equations, and then we examine how our understanding of calculus is modified in this context.

In Lesson 1.2 we turn our attention to another coordinate system: the polar coordinate system. We study the properties of geometrical shapes defined by polar coordinates, as well as the relationship between the polar coordinate system and the Cartesian system.

We finish with Lesson 1.3 by studying geometrical shapes known as conic sections—their formulas, graphical representations and properties.

Lesson 1.1 Parametric Curves

Learning Objectives

When you have completed this lesson, you will be able to

- represent curves with parametric equations.
- generate a function or implicit function for a parameterized curve.
- calculate tangents to parametric curves.
- calculate areas under parametric curves.
- calculate arc lengths of parametric curves.
- calculate surface areas defined by rotation of a parametric curve about an axis.

Activities

Reading: Chapter 10, Section 10.1: “Curves Defined by Parametric Equations”

Note: Be sure to read through all the examples.

Explore It: Section 10.1, including the “Explore & Test” exercises

- “Explore it: Parametric Curves”
- “Explore it: Families of Cycloids”

Lab: Lab 10.1: “Parametric Equations”

this text is to help students learn to use calculus intelligently for solving a wide variety of mathematical and physical
problems This book is an outgrowth of our teaching of calculus at Berkeley and the present edition incorporates many
improvements based on our use of the first edition We list below some of the key features of the book Examples and
Exercises The exercise sets have been carefully constructed to be of maximum use to the students With few exceptions we
adhere to the following policies The section exercises are graded into three consecutive groups a The first exercises are
routine modelled almost exactly on the exam ples these are intended to give students confidence b Next come exercises that
are still based directly on the examples and text but which may have variations of wording or which combine different ideas
these are intended to train students to think for themselves c The last exercises in each set are difficult These are marked
with a star and some will challenge even the best studep ts Difficult does not necessarily mean theoretical often a starred
problem is an interesting application that requires insight into what calculus is really about The exercises come in groups of
two and often four similar ones **College of Engineering** University of Michigan. College of Engineering, 1983
