Abstract

These authors proposed a group of three simple algebraic conditions for the existence of a group. The first condition is that the set of elements must be finite. The second condition is that the set of elements must be closed under the operation. The third condition is that the operation must be associative. These conditions are necessary for the existence of a group, but they are not sufficient. For example, the set of integers under addition is a group, but the set of integers under multiplication is not a group because it does not contain the multiplicative identity, 1.
