IMPORTANT SAFETY CONSIDERATIONS

It is very important for the user to consider the possible adverse effects of power, wiring, component, sensor, or software failures in designing any type of control or monitoring system. This is especially important where economic property loss or human life is involved. It is important that the user employ satisfactory overall system design. It is agreed between the Buyer and Acromag, that this is the Buyer's responsibility.

Notes (Table 1):

1. Alarm can be ordered with or without the factory calibration "-C" option. Consult the selection & ordering guide for information required. Any customer specified calibration information will be included on a separate calibration label on the unit.
2. Consult the factory for current information on agency (e.g. Canadian Standards Association, etc.) approvals.

DESCRIPTION:

This two-wire, loop-powered alarm accepts a 4 to 20mA input signal and provides a failsafe, completely isolated, SPDT (1 Form C) dry contact relay output for switching AC or DC loads. The unit derives all operating power from the loop and has a voltage drop of only 4.5VDC. Being completely loop energized, this alarm is ideally suited to provide a local alarm indication for already existing 2, 3, or 4-wire transmitters, without the need for additional wiring. The alarm setpoint is fully adjustable from 4mA to 24mA. The setpoint voltage may be precisely read at the field wiring terminals of the unit. Internal DIP switches with Gold contacts allow the selection of H/L/O failsafe alarm action, six values of deadband, and latching or auto-reset operation. An LED provides a visual indication of the alarm condition.

The Alarm is RFI-protected, operates over a wide temperature range, and features excellent temperature coefficients which minimize the effects from harsh plant environments. See Drawing 4501-114 for a simplified schematic.
