Siberian Traps and Pt-Cu-Ni Deposits in the Noril'sk Area Nadezhda A. Krivolutsкая, 2015-12-09 This book addresses fundamental problems in the evolution of magmatic and ore forming processes in the Noril'sk area of northern Central Siberia Based on

data on the geology and geochemistry of rocks obtained by the author in the course of fieldworks and new analytical studies applying XRF ICP MS microprobe analysis ion probe analysis and studying melt and fluid inclusions in olivine as well as stable and radiogenic isotopes in the rocks it was proposed a new scheme for the evolution of magmatism including two episodes rift and trap per se The ultramafic mafic massifs are classified into three geochemical types the most important of which the ore bearing Noril sk type was formed in post Nadezhdinsky time as an independent pulse of magmatic activity The primary melts for ore bearing intrusions had tholeiitic composition with elevated MgO 8 wt% and low volatile contents data from melt inclusions in olivine and pyroxenes in combination with numerical simulations using the COMAGMAT program package The assimilation of host rocks by the parental melts was studied in the contact zones of the Maslovsky and Talnakh intrusions It was shown that it had taken place only in narrow zones about 1 2 m and did not played sufficient role in ore formation It was suggested that the source of the material was lower crustal rocks in long lived rift zones where sulfides accumulated in several stages The book offers a valuable resource for specialists in the geology of ore deposits and petrology as well as for advanced Geology students

The Inverted Classroom Model Jürgen Handke,Natalie Kiesler,Leonie Wiemeyer,2013-10-24 When the 1st German Inverted Classroom Conference was staged in 2012 the organizers thought that it may have been the first and last conference of this kind Too few teachers seemed to be familiar with this model in the first place and only a tiny fragment of them would actually apply this model to their own teaching scenarios However in the 2013 conference we were overwhelmed with a large number of teachers who not only wanted to find out about this teaching and learning concept but had already used it Consequently the focus of the 2nd German Inverted Classroom Conference to which this conference volume is dedicated was no longer the installation of the Inverted Classroom Model ICM but fine adjustments in the actual application of it This is reflected in the contributions to this volume Even though all three central aspects of the ICM are addressed 1 content production and delivery 2 testing and 3 the in class phase there has been a shift away from mere content production towards an expansion of the model as well as a move towards fine adjustments of the three components

Novel Applications of Bayesian and Other Models in Translational Neuroscience Reza Rastmanesh , Jacob Raber , Edward W. Hsu , Benjamin R. Pittman-Polletta, 2024-05-06 It has been proposed that the brain works in a Bayesian manner and based on the free energy principle the brain s main function is to reduce environmental uncertainty this is a proposed model as a universal principle governing adaptive brain function and structure There are many pathophysiological and clinical observations that can be easily explained by predictive Bayesian brain models However the novel applications of Bayesian models in translational neuroscience has been understudied and underreported For example variational Bayesian mixed effects inference has been successfully tested for classification studies A multi task Bayesian compressive sensing approach to simultaneously estimate the full posterior of the CSA ODF and diffusion weighted volumes from multi shell HARDI acquisitions has been recently publishe
