Introduction to Differential and Difference Equations through Modeling William P. Fox, Robert E. Burks, Jr., 2025-07-09

This book presents an opportunity to learn difference and differential equations through a modeling first approach. The text is meant as an introduction to those equations and not as a text only for modeling courses. No previous exposure to these equations is expected. Modeling in Introduction to Differential and Difference Equations through Modeling is presented as the vehicle for learning difference and differential equations. Although the topics in difference and differential equations are consistent with those in other textbooks, this approach differs. The presentation starts with a model or several models and offers the solution with minor discussions. Then methods to obtain those solutions are presented and show these same models and others again in more detail. This approach is designed to focus on the use of difference and differential equations to solve real world problems and to learn not only these primary topics but how to apply these through modeling. The authors begin with a review of matrix algebra, then an introduction to modeling. The text progresses to discrete dynamical systems and then to the standard organization of most differential equation texts, making the alignment with a current syllabus easier.

Technology is a significant modeling component. Excel, Python, and Maple are presented as methods to solving the models.

This material has been class tested at the US Military Academy at West Point, Marian University, the College of William Mary, and the Naval Postgraduate School with great success. Mathematical Modeling in the Age of the Pandemic William P.

Fox, 2021-06-09. One cannot watch or read about the news these days without hearing about the models for COVID-19 or the testing that must occur to approve vaccines or treatments for the disease. The purpose of Mathematical Modeling in the Age of a Pandemic is to shed some light on the meaning and interpretations of many of the types of models that are or might be used in the presentation of analysis. Understanding the concepts presented is essential in the entire modeling process of a pandemic. From the virus itself and its infectious rates and deaths rates to explain the process for testing a vaccine or eventually a cure, the author builds, presents, and shows model testing. This book is an attempt based on available data to add some validity to the models developed and used, showing how close to reality the models are to predicting results from previous pandemics such as the Spanish flu in 1918 and more recently the Hong Kong flu. Then the author applies those same models to Italy, New York City, and the United States as a whole. Modeling is a process. It is essential to understand that there are many assumptions that go into the modeling of each type of model. The assumptions influence the interpretation of the results. Regardless of the modeling approach, the results generally indicate approximately the same results. This book reveals how these interesting results are obtained. **Applications of Operations Research and Management Science for**

Military Decision Making William P. Fox, Robert Burks, 2019-08-28. Based on many years of applied research, modeling, and educating future decision makers, the authors have selected the critical set of mathematical modeling skills for decision

analysis to include in this book The book focuses on the model formulation and modeling building skills as well as the technology to support decision analysis The authors cover many of the main techniques that have been incorporated into their three course sequence in mathematical modeling for decision making in the Department of Defense Analysis at the Naval Postgraduate School The primary objective of this book is illustrative in nature It begins with an introduction to mathematical modeling and a process for formally thinking about difficult problems illustrating many scenarios and illustrative examples The book incorporates the necessary mathematical foundations for solving these problems with military applications and related military processes to reinforce the applied nature of the mathematical modeling process

Modeling Operations Research and Business Analytics William P Fox, Robert E. Burks, 2024-08-30 This book provides sample exercises techniques and solutions to employ mathematical modeling to solve problems in Operations Research and Business Analytics Each chapter begins with a scenario and includes exercises built on realistic problems faced by managers and others working in operations research business analytics and other fields employing applied mathematics A set of assumptions is presented and then a model is formulated A solution is offered followed by examples of how that model can be used to address related issues Key elements of this book include the most common problems the authors have encountered over research and while consulting the fields including inventory theory facilities location linear and integer programming assignment transportation and shipping critical path dynamic programming queuing models simulation models reliability of system multi attribute decision making and game theory In the hands of an experienced professional mathematical modeling can be a powerful tool This book presents situations and models to help both professionals and students learn to employ these techniques to improve outcomes and to make addressing real business problems easier The book is essential for all managers and others who would use mathematics to improve their problem solving techniques No previous exposure to mathematical modeling is required The book can then be used for a first course on modeling or by those with more experience who want to refresh their memories when they find themselves facing real world problems The problems chosen are presented to represent those faced by practitioners The authors have been teaching mathematical modeling to students and professionals for nearly 40 years This book is presented to offer their experience and techniques to instructors students and professionals
