1.1 Relic

- 1 Discussions should be based on the idea of *Darkness* being in the mystery genre. Learners might consider the following:

- The title – what does the word 'dark' suggest literally and metaphorically? Link to the darkness in the extract but also other connotations of darkness.
- The literal meaning of the word 'Relic' and what this could suggest about the character. Link to the content of the extract particularly (as *if* she belonged to another time). 'Louis' is a normal, everyday name (in contrast to the other characters), signifying a recognisable, real-world character common to

protagonists in some fantasy texts. He is the reader's identifiable, sympathetic character.

- The setting, and how it builds atmosphere, linking ideas to the extract: *ancient catacombs, narrow tunnels, back streets of Paris*. Learners may contrast this with the mundane nature of *local supermarket and small apartment*.
- The unanswered questions readers may

have about the events so far: Who is Relic? How did she know Louis's name? Who is The Doorkeeper? What does she mean by the one? Why does she want him to come back to the catacombs the next day? They all point to the mystery genre.

- Responses to the picture will vary.

- 2 Paragraphs should include some of the following:

- The explicit information revealed about Louis: he is 17 (young), lives in a small apartment (sense of

Knowledge-Based Intelligent Information and Engineering Systems Vasile Palade, 2003-10-25 During recent decades we have witnessed not only the introduction of automation into the work environment but we have also seen a dramatic change in how automation has influenced the conditions of work While some 30 years ago the addition of a computer was considered only for routine and boring tasks in support of humans the balance has dramatically shifted to the computer being able to perform almost any task the human is willing to delegate The very fast pace of change in processor and information technology has been the main driving force behind this development Advances in automation and especially Artificial Intelligence AI have enabled the formation of a rather unique team with human and electronic members The team is still supervised by the human with the machine as a subordinate associate or assistant sharing responsibility authority and autonomy over many tasks The requirement for teaming human and machine in a highly dynamic and unpredictable task environment has led to impressive achievements in many supporting technologies These include methods for system analysis design and engineering and in particular for information processing for cognitive and complex knowledge 1 engineering

Database Repairing and Consistent Query Answering Leopoldo Bertossi, 2022-05-31 Integrity constraints are semantic conditions that a database should satisfy in order to be an appropriate model of external reality In practice and for many reasons a database may not satisfy those integrity constraints and for that reason it is said to be inconsistent However and most likely a large portion of the database is still semantically correct in a sense that has to be made precise After having provided a formal characterization of consistent data in an inconsistent database the natural problem emerges of extracting that semantically correct data as query answers The consistent data in an inconsistent database is usually characterized as the data that persists across all the database instances that are consistent and minimally differ from the inconsistent instance Those are the so called repairs of the database In particular the consistent answers to a query posed to the inconsistent database are those answers that can be simultaneously obtained from all the database repairs As expected the notion of repair requires an adequate notion of distance that allows for the comparison of databases with respect to how much they differ from the inconsistent instance On this basis the minimality condition on repairs can be properly formulated In this monograph we present and discuss these fundamental concepts different repair semantics algorithms for computing consistent answers to queries and also complexity theoretic results related to the computation of repairs and doing consistent query answering Table of Contents Introduction The Notions of Repair and Consistent Answer Tractable CQA and Query Rewriting Logically Specifying Repairs Decision Problems in CQA Complexity and Algorithms Repairs and Data Cleaning
