Use the digits 0-9 to fill in the squares. Each digit can be used only once.

$$x^2 - x - \square = (x + 2)(x - \square)$$

$$x^2 - 1\square x + 1\square = (x - 2)(x - \square)$$

$$x^2 + \square x + 1\square = (x + \square)(x + 2)$$

Cooperative Research Projects ,1960 The Joy of Factoring Samuel S. Wagstaff (Jr.),2013-10-24 This book is about the theory and practice of integer factorization presented in a historic perspective It describes about twenty algorithms for factoring and a dozen other number theory algorithms that support the factoring algorithms Most algorithms are described both in words and in pseudocode to satisfy both number theorists and computer scientists Each of the ten chapters begins with a concise summary of its contents This book is written for readers who want to learn more about the best methods of factoring integers many reasons for factoring and some history of this fascinating subject It can be read by anyone who has taken a first course in number theory Publisher website The Mathematics Education for the Future Project - Proceedings of the 14th International Conference Alan Rogerson,Janina Morska,2017-07-01 This volume contains the papers presented at the International Conference on Challenges in Mathematics Education for the Next Decade held from September 10 15 2017 in Balatonf red Hungary The Conference was organized by The Mathematics Education for the Future Project an international edu cational project founded in 1986 Project and Cost Engineers' Handbook Kenneth K.
