**Wendy Lawson, Nguyen Nghi H.**

## **Algebra If8762 Linear Equations And Inequalities:**

Equations and Inequalities Guido Walz, 2021-07-02 The book teaches the basics of solving equations and inequalities in easily understandable language One of the main topics is the solving of quadratic equations regardless of whether they already exist in normal form or have to be brought into it first The author treats the p q formula and the midnight formula as tools for this purpose In addition the book deals with linear equations and in general with the question of which manipulations one may make on an equation without changing its solutions Furthermore the most important inequalities are treated and strategies for their solution are shown This Springer essential is a translation of the original German 1st edition essentials Gleichungen und Ungleichungen by Guido Walz published by Springer Fachmedien Wiesbaden GmbH part of Springer Nature in 2018 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors

**Equations and Inequalities** Jiri Herman, Radan Kucera, Jaromir Simsa, 2000-03-23 A look at solving problems in three areas of classical elementary mathematics equations and systems of equations of various kinds algebraic inequalities and elementary number theory in particular divisibility and diophantine equations In each topic brief theoretical discussions are followed by carefully worked out examples of increasing difficulty and by exercises which range from routine to rather more challenging problems While it emphasizes some methods that are not usually covered in beginning university courses the book nevertheless teaches techniques and skills which are useful beyond the specific topics covered here With approximately 330 examples and 760 exercises

**Linear Equations Workbook** Maria Miller, 2017-01-06 Linear Equations Workbook presents the student with the basics of solving linear equations including equations that involve a variable on both sides and equations that require the usage of the distributive property to eliminate parentheses We also briefly study inequalities and graphing This workbook best suits pre algebra or grades 7 to 8 mathematics studies The first lesson reviews the concept of an equation and how to model equations using a pan balance scale The basic principle for solving equations is that when you perform the same operation on both sides of an equation the two sides remain equal The workbook presents two alternatives for keeping track of the operations to be performed on an equation The one method writing the operation under each side of the equation is common in the United States The other method writing the operation in the right margin is common in Finland Either way is correct and the choice is just a matter of the personal preference of the teacher The introduction to solving equations is followed by a lesson on addition and subtraction equations and another on multiplication and division equations All the equations are easily solved in only one step of calculations The twofold goal is to make the student proficient in manipulating negative integers and also to lay a foundation for handling more involved equations that are studied later on in the workbook

In the next lesson students write equations to solve simple word problems Even though they could solve most of these problems without using the equations the purpose of the lesson is to make the student proficient in writing simple equations before moving on to more complex equations from more difficult word problems The next topic in the lesson Constant Speed is solving problems with distance  $d$  rate or velocity  $v$  and time  $t$  Students use the equivalent formulas  $d = vt$  and  $v = d/t$  to solve problems involving constant or average speed They learn an easy way to remember the formula  $v = d/t$  from the unit for speed that they already know miles per hour In later lessons we delve deeper into our study of equations Now the equations require two or more steps to solve and may contain parentheses The variable may appear on both sides of the equation Students will also write equations to solve simple word problems There is also a lesson on patterns of growth which may seem to be simply a fascinating topic but in reality presents the fundamentals of a very important concept in algebra that of linear functions although they are not mentioned by that name and complements the study of lines in the subsequent lessons After the section about equations the text briefly presents the basics of inequalities and how to graph them on a number line Students apply the principles for solving equations to solve simple inequalities and word problems that involve inequalities The last major topic is graphing Students begin the section by learning to graph linear equations and continue on to the concept of slope which in informal terms is a measure of the inclination of a line More formally slope can be defined as the ratio of the change in  $y$  values to the change in  $x$  values The final lesson applies graphing to the previously studied concepts of speed time and distance through graphs of the equation  $d = vt$  in the coordinate plane

Linear Equations, Inequalities, and Functions Wendy Lawson, Nguyen Nghi H., 2005 Supplemental math textbook for high school students with innovative features shortcuts in solving linear equations and inequalities innovative techniques in solving by number line innovative approaches in solving by graphing using graphing calculators
