The Dawn Angiosperms Xin Wang, 2010-08-12 Angiosperms are the most diversified plant group in the world being represented by ca 300 000 species in about 400 families Like all of Life including ourselves they have had their own history and gone through many evolutionary stages before they arrived at their current forms The origin of Angiospermae flowering plants has been the subject of much dispute because this is a key event in the history of life and has a far reaching influence on our understanding of relationships among seed plants as a whole as well as within the angiosperms Until recently most of palaeobotanists recognized angiosperms only from the Cretaceous and younger strata This contradicts the results of molecular analyses I have been working on Mesozoic fossil plants for the past two decades during which time I have studied a number of fossil plants Some of these fossil plants have been published as Jurassic angiosperms and unsurprisingly many questions and doubts have been raised about them These questions need to be addressed seriously and journal papers do not provide sufficient space to compare and relate these early angiosperms In this book these pioneer angiosperms are documented in detail sometimes with new specimens not studied before Also I propose a definition of angiosperms that could be adopted in palaeobotany My aim is to improve clarity and objectivity of judgment about what constitutes a fossil angiosperm **CUET PG B.Ed Science - Question Bank (2400 MCQs Chapterwise)** Mocktime Publication, 2400 MCQs CUET PG Question
