Animal Welfare in Extensive Production Systems Juan Villalba,Xavier Manteca,2016-07-29 There has been a lot written about animal welfare in intensive farming systems but very little about animals reared in extensive agricultural systems Yet these animals make up a significant

proportion of the world's farm animal population covering a large portion of the globe. Animals kept in extensive conditions face a unique set of challenges that are vital for anyone with an interest in farm animal welfare to understand. *Animal Welfare in Extensive Production Systems* presents those challenges in a practical way backed up with thoroughly referenced research. Topics covered include heat stress, water quality and availability, nutrition, predation, poisonous plants, transport, human-animal interactions, and neonatal mortality. This book is ideal for animal welfare academics, students, and researchers. It can also be beneficial to students in animal science, veterinary science, and agriculture, and to farm industry producers and personnel. The Animal Welfare Series covers current topics in animal welfare to further research and inform the scientific policy making and farming communities. 5m Books

Animal Husbandry Regained John Webster, 2013. The farming of animals for meat and milk confronts a stark dilemma. While world demand from a growing and more affluent human population is increasing rapidly, there are strong counter arguments that we should eat less meat and pay more attention to environmental protection, animal welfare, and human health and well-being. The aim of this book is to identify and explain the causes and contributors to current problems in animal husbandry, especially those related to factory farming, and advance arguments that may contribute to its successful re-orientation. Husbandry is considered in its broadest sense, namely the productive and sustainable use of the land for the good of all plants, humans, and other animals. The first part of the book outlines principles and arguments necessary to engage with current problems: depletion of natural resources and destruction of environment, animal welfare, food and health, fair trade, and sharing resources. These arguments are illustrated by examples and sufficient evidence to justify the argument without obscuring the message. The second part presents a series of constructive proposals for change and development in animal husbandry, both in the developed world and subsistence agriculture. These include more integrated crop and livestock farming systems, the ethics of animal welfare, and environmental management, and the evolution of a new social contract whereby the rights of the people to a fair share of
