The Art and Science of Trauma and the Autobiographical Meg Jensen, 2019-01-04 This book examines posttraumatic autobiographical projects elucidating the complex relationship between the science of trauma and how that idea is understood across various scientific disciplines and the rhetorical strategies of fragmentation dissociation reticence

and repetitive troping widely used the representation of traumatic experience From autobiographical fictions to prison poems from witness testimony to autography and from testimonio to war memorials otherwise dissimilar projects speak of past suffering through a limited and even predictable discourse in search of healing Drawing on approaches from literary human rights and cultural studies that highlight relations between trauma language meaning and self hood and the latest research on the science of trauma from the fields of clinical behavioral and evolutionary psychology and neuroscience I read such autobiographical projects not as symptoms but as complex interrogative negotiations of trauma and its aftermath

Post-Traumatic Stress Disorder J.F. Pagel, 2020-09-22 PTSD is in no way an easy diagnosis for the patient the provider or the therapist It is a diagnosis developed at the border of our capacity to handle extreme stress a marker diagnosis denoting the limits of our capacity for functioning in the stress of this modern world For both individuals and society PTSD marks the limits of our available compassion and our capacity to protect ourselves from the dangers of the environment and other humans PTSD is often a chronic disease forming at a place where mind sometimes no longer equals the brain a point at which individual patient requirements often trump theory and belief There are treatments for PTSD that work and many that do not This book presents evidence rather than theory anecdote or case report Psychological approaches including prolonged exposure imagery rehearsal therapy and EMDR have a greater than 75% positive short term response when used to treat PTSD Yet these treatments vary markedly and have different even contradictory underlying theory and objectives for treatment Medications rarely indicated as primary therapy can be used to treat symptoms and address comorbid PTSD diagnoses Treatment of sleep apnea in the PTSD population produces a positive effect on symptoms and a reduction in morbidity and mortality across the span of life Complementary treatments offer the many individuals chronically affected by PTSD assistance in coping with symptoms and opportunities to attempt to functionally integrate their experience of trauma
