Problems For Metagrobologists: A Collection Of Puzzles With Real Mathematical, Logical Or Scientific

Content David Singmaster, 2016-02-23 The collection contains many delightful and enjoyable problems that are either original or taken from old books which are no longer easily accessible I especially like the detailed solutions which make it clear that the author has carefully re examined all the old problems and often discovered that the previously published solutions were incomplete Some problems are best solved with the help of a computer and can serve as original exercises in computer programming The book provides an enjoyable read and should not be missing in the library of any metagrobologist

zbMATH Definition of metagrobologist puzzle mystify puzzle out Hence metagrobology is the study of puzzles and metagrobologist an expert in such study David Singmaster is possibly the world's best known metagrobologist He gained prominence in the 1980s with a booklet on how to solve the Rubik's Cube This book is a collection of over 200 problems that David Singmaster has composed since 1987 Some of the math problems have appeared in his various puzzle columns for BBC Radio and TV Canadian Broadcasting Focus the UK popular science magazine Games and Puzzles the Los Angeles Times Micromath the Puzzle a Day memo pad and the Weekend Telegraph While some of these are already classics many of the puzzles have not been published elsewhere previously Puzzle enthusiasts of all ages will find here arithmetic problems properties of digits monetary problems alpha metrics Diophantine problems magic figures sequence problems logical problems geometric problems physics problems combinatorial problems geographic problems calendar problems clock problems dissection problems and verbal problems Can you solve it Are you smarter than a metagrobologist Check out Alex Bellos's Monday Puzzle on The Guardian as he features two sequence puzzles from the book

Algebraic Sudoku Bk 2 Tony G. Williams, 2011-09-01 Algebraic Sudoku follows the traditional algebra curriculum while challenging students' minds with fun puzzles that develop logic reasoning skills concentration and confidence Each Sudoku puzzle is like a mini lesson with background discussion strategy and demonstration for solving each problem After completing the algebra exercises students are given enough data that will allow them to reason their way through the remaining cells of the Sudoku puzzle that follows Each activity is presented on a ready to use reproducible master that can be easily photocopied or reproduced as a transparency for full class instruction and discussion With more than 30 activities in each book Algebraic Sudoku is a must have resource for all students enrolled in or preparing to take algebra or for anyone who wants to keep their algebraic skills sharp

The Joy of Factoring Samuel S. Wagstaff (Jr.), 2013-10-24 This book is about the theory and practice of integer factorization presented in a historic perspective It describes about twenty algorithms for factoring and a dozen other number theory algorithms that support the factoring algorithms Most algorithms are described both in words and in pseudocode to satisfy both number theorists and computer scientists Each of the ten chapters begins with a concise summary of its contents

This book is written for readers who want to learn more about the best methods of factoring integers many reasons for factoring and some history of this fascinating subject It can be read by anyone who has taken a first course in number theory
Publisher website **The Theory of Hash Functions and Random Oracles** Arno Mittelbach, Marc Fischlin, 2021-01-19

Hash functions are the cryptographer's Swiss Army knife Even though they play an integral part in today's cryptography existing textbooks discuss hash functions only in passing and instead often put an emphasis on other primitives like encryption schemes In this book the authors take a different approach and place hash functions at the center The result is not only an introduction to the theory of hash functions and the random oracle model but a comprehensive introduction to modern cryptography After motivating their unique approach in the first chapter the authors introduce the concepts from computability theory probability theory information theory complexity theory and information theoretic security that are required to understand the book content In Part I they introduce the foundations of hash functions and modern cryptography They cover a number of schemes concepts and proof techniques including computational security one way functions pseudorandomness and pseudorandom functions game based proofs message authentication codes encryption schemes signature schemes and collision resistant hash functions In Part II the authors explain the random oracle model proof techniques used with random oracles random oracle constructions and examples of real world random oracle schemes They also address the limitations of random oracles and the random oracle controversy the fact that uninstantiable schemes exist which are provably secure in the random oracle model but which become insecure with any real world hash function Finally in Part III the authors focus on constructions of hash functions This includes a treatment of iterative hash functions and generic attacks against hash functions constructions of hash functions based on block ciphers and number theoretic assumptions a discussion of privately keyed hash functions including a full security proof for HMAC and a presentation of real world hash functions The text is supported with exercises notes references and pointers to further reading and it is a suitable textbook for undergraduate and graduate students and researchers of cryptology and information security

Algorithmic Puzzles Anany Levitin, Maria Levitin, 2011-10-14 Algorithmic puzzles are puzzles involving well defined procedures for solving problems This book will provide an enjoyable and accessible introduction to algorithmic puzzles that will develop the reader's algorithmic thinking The first part of this book is a tutorial on algorithm design strategies and analysis techniques Algorithm design strategies exhaustive search backtracking divide and conquer and a few others are general approaches to designing step by step instructions for solving problems Analysis techniques are methods for investigating such procedures to answer questions about the ultimate result of the procedure or how many steps are executed before the procedure stops The discussion is an elementary level with puzzle examples and requires neither programming nor mathematics beyond a secondary school level Thus the tutorial provides a gentle and entertaining introduction to main ideas in high level algorithmic problem solving The second and main part of the book contains 150

puzzles from centuries old classics to newcomers often asked during job interviews at computing engineering and financial companies The puzzles are divided into three groups by their difficulty levels The first fifty puzzles in the Easier Puzzles section require only middle school mathematics The sixty puzzle of average difficulty and forty harder puzzles require just high school mathematics plus a few topics such as binary numbers and simple recurrences which are reviewed in the tutorial All the puzzles are provided with hints detailed solutions and brief comments The comments deal with the puzzle origins and design or analysis techniques used in the solution The book should be of interest to puzzle lovers students and teachers of algorithm courses and persons expecting to be given puzzles during job interviews *Mathematical Problems and Puzzles* S. Straszewicz, 2014-06-28 Popular Lectures in Mathematics Volume 12 Mathematical Problems and Puzzles From the Polish Mathematical Olympiads contains sample problems from various fields of mathematics including arithmetic algebra geometry and trigonometry The contest for secondary school pupils known as the Mathematical Olympiad has been held in Poland every year since 1949 50 This book is composed of two main parts Part I considers the problems and solutions about integers polynomials algebraic fractions and irrational experience Part II focuses on the problems of geometry and trigonometric transformation along with their solutions The provided solutions aim to extend the student s knowledge of mathematics and train them in mathematical thinking This book will prove useful to secondary school mathematics teachers and students
