Vogel,2018-08-16 Economists broadly define financial asset price bubbles as episodes in which prices rise with notable rapidity and depart from historically established asset valuation multiples and relationships Financial economists have for decades attempted to study and interpret bubbles through the prisms of rational expectations efficient markets and equilibrium arbitrage and capital asset pricing models but they have not made much if any progress toward a consistent and reliable theory that explains how and why bubbles and crashes evolve and can also be defined measured and compared This book develops a new and different approach that is based on the central notion that bubbles and crashes reflect urgent short side rationing which means that as such extreme conditions unfold considerations of quantities owned or not owned begin to displace considerations of price *Anticipatory Ethics and The Use of CRISPR in Humans* Michael W. Nestor,Richard L. Wilson,2022-05-20 The future of gene editing in humans will involve the use of CRISPR How we think about the combination of the scientific ethical and moral aspects of this technology is paramount to the success or failure of CRISPR in humans Unfortunately the current scientific discussion around CRISPR in humans has left ethics trailing behind due to the rapid pace of innovation New modes of ethics and stakeholder participation are needed to keep pace with rapid scientific advances and provide the necessary policy and ethical frameworks necessary to help CRISPR flourish as an important health care tool to treat human disease This requires intense interdisciplinary collaboration and discussion between scientists and philosophers policymakers and legal scholars and the public Dr Michael W Nestor a neuroscientist

who actively uses CRISPR in pre clinical research and Professor Richard Wilson a philosopher who focuses on anticipatory ethics set out to develop a new ethical approach considering the use of CRISPR in human targeted therapies The field of anticipatory ethics is uniquely poised to tackle questions in fast evolving technical areas where the pace of innovation outstrips traditional philosophical approaches Furthermore because of its anticipatory nature this type of analysis provides the opportunity to look ahead and into the future concerning potential uses of CRISPR in humans uses that are not currently possible Nestor and Wilson collaborate both scientifically and philosophically in this book to forecast potential outcomes as the scientific and medical community goes beyond using CRISPR to correct genes that underlie diseases where a single gene is involved Instead Nestor and Wilson envision CRISPR in complex multigenic disorders with a specific focus on the use of CRISPR to edit genes involved in mental traits like IQ or other cognitive characteristics They argue that the use of CRISPR to modify genes that are potentially important for mental traits represents a particular category for special consideration from scientists policymakers the public and other stakeholders Nestor and Wilson explain why using CRISPR to alter mental states is very different from treating a disease like cancer by combining the latest scientific advancements with anticipatory ethics and philosophical phenomenology Their analysis considers the role that mental states play in personhood and the lived experience as genes that can change mental cognitive attributes like IQ have wide ranging effects on the lived experience in ways that are categorically different from other attributes This book was written to set a non exhaustive framework for shared understanding and discussion across disciplines and appeal to scientists and non scientists alike This appeal is made inclusively inviting all stakeholders to engage in active dialogue about the appropriate context for using CRISPR and other gene editing technologies in humans It provides policy analysis and recommendations for assuring the most inclusive equitable and ethically sound use of CRISPR in humans concerning its positive potential to treat mental conditions like depression schizophrenia Alzheimer s disease autism and the potential to induce other cognitive enhancements
