Virtual Screening for Bioactive Molecules Hans-Joachim Böhm, Gisbert Schneider, 2008-11-21 Recent progress in high throughput screening combinatorial chemistry and molecular biology has radically changed the approach to drug discovery in the pharmaceutical industry New challenges in synthesis result in new analytical methods At present typically 100 000 to one million molecules have to be tested within a short period and therefore highly effective screening methods are necessary for today's researchers preparing and characterizing one compound after another belongs to the past Intelligent computer based search agents are needed and virtual screening provides solutions to many problems Such screening comprises innovative computational techniques designed to turn raw data into valuable chemical information and to assist in extracting the relevant molecular features This handbook is unique in bringing together the various efforts in the field of virtual screening to provide the necessary methodological framework for more effective research Leading experts give a thorough introduction to the state of the art along with a critical assessment of both successful applications and drawbacks The information collated here will be indispensable for experienced scientists as well as novices working in medicinal chemistry and related disciplines

Mass Spectrometry R. A. W. Johnstone, 1975-12-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born

The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

Reviews in Computational Chemistry, Volume 4 Kenny B. Lipkowitz, Donald B. Boyd, 2009-09-22 This volume in the series brings together renowned experts in the field to present the reader with an account of the latest developments in quantum mechanics molecular dynamics and the teaching of computational chemistry There are so many developments in the field of computational chemistry that it is difficult to keep track of them The series was established to review the high volume of developments in the field Rather than create a traditional article each author approaches a topic to enable the reader to understand and solve problems and locate key references quickly Each article has tutorial value An updated compendium of software for molecular modeling appears as an appendix as in previous volumes To the editors knowledge this is the most complete listing of sources of software for computational chemistry anywhere
