Mayr, Evgenii Vasil'evich Vorozhtsov, 2005-08-30 This book constitutes the refereed proceedings of the 8th International Workshop on Computer Algebra in Scientific Computing CASC 2005 held in Kalamata Greece in September 2005 The 41 revised full papers presented were carefully reviewed and selected from 75 submissions The topics addressed in the workshop cover all the basic areas of scientific computing as they benefit from the application of computer algebra methods and software algebraic methods for nonlinear polynomial equations and inequalities symbolic numeric methods for differential and differential algebraic equations algorithmic and complexity considerations in computer algebra algebraic methods in geometric modelling aspects of computer algebra programming languages automatic reasoning in algebra and geometry complexity of algebraic problems exact and approximate computation parallel symbolic numeric computation Internet accessible symbolic and numeric computation problem solving environments symbolic and numerical computation in systems engineering and modelling computer algebra in industry solving problems in the natural sciences numerical simulation using computer algebra systems mathematical communication **Access to Supercomputers** ,1985 Applied Partial Differential Equations J. David Logan, 2012-12-06 This textbook is for the standard one semester junior senior course that often goes by the title Elementary Partial Differential Equations or Boundary Value Problems The audience usually consists of students in mathematics engineering and the physical sciences The topics include derivations of some of the standard equations of mathematical physics including the heat equation the wave equation and the Laplace's equation and methods for solving those equations on bounded and unbounded domains Methods include eigenfunction expansions or separation of variables and methods based on Fourier and Laplace transforms Prerequisites include calculus and a post calculus differential equations course There are several excellent texts for this course so one can legitimately ask why one would wish to write another A survey of the content of the existing titles shows that their scope is broad and the analysis detailed and they often exceed five hundred pages in length These books generally have enough material for two three or even four semesters Yet many undergraduate courses are one semester courses The author has often felt that students become a little uncomfortable when an instructor jumps around in a long volume searching for the right topics or only partially covers some topics but they are secure in completely mastering a short well defined introduction This text was written to provide a brief one semester introduction to partial differential equations **Resources in Education** ,1981 *Computerworld* ,2002-05-13 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld's award winning Web site Computerworld.com twice monthly publication focused conference series and custom research form the hub of the world's largest global IT media network **Computer Algebra Systems** Michael J. Solving Nonlinear Partial Differential Equations with Maple and Mathematica Inna Shingareva, Carlos Lizárraga-Celaya, 2011-07-24 The emphasis of the book is given in how to construct different types of solutions exact approximate analytical numerical graphical of numerous nonlinear PDEs correctly easily and quickly The reader can learn a wide variety of techniques and solve numerous nonlinear PDEs included and many other differential equations simplifying and transforming the equations and solutions arbitrary functions and parameters presented in the book Numerous comparisons and relationships between various types of solutions different methods and approaches are provided the results obtained in Maple and Mathematica facilitates a deeper understanding of the subject Among a big number of CAS we choose the two systems Maple and Mathematica that are used worldwide by students research mathematicians scientists and engineers As in our previous books we propose the idea to use in parallel both systems Maple and Mathematica since in many research problems frequently it is required to compare independent results obtained by using different computer algebra systems Maple and or Mathematica at all stages of the solution process One of the main points related to CAS is based on the implementation of a whole solution method e.g. starting from an analytical derivation of exact governing equations constructing discretizations and analytical formulas of a numerical method performing numerical procedure obtaining various visualizations and comparing the numerical solution obtained with other types of solutions considered in
