
AQA GCSE CHEMISTRY REVISION- C1.4 CRUDE OIL AND FUELS QUESTIONS WITH CORRECT ANSWERS 2025

Hydrocarbon - CORRECT ANSWER -A compound containing only hydrogen and carbon

Alkane - CORRECT ANSWER -A saturated hydrocarbon.

Saturated Hydrocarbon - CORRECT ANSWER -There is a single carbon-carbon bond and no more hydrogen atoms can be added.

Where did crude oil come from? - CORRECT ANSWER -

Animals and plants sink to the bottom of the sea when they die, but do not decay as there is no oxygen for the bacteria to feed on. They are kept under high pressure and high temperatures so become crude oil. This process takes millions of years.

Explain Fractional Distillation - CORRECT ANSWER -

Hot crude oil vapour is pumped into the bottom (the hottest part) of the fractionating column. As crude oil is a mixture of hydrocarbons, as the vapour rises, and the temperature decreases different hydrocarbons with high-low boiling points condense and are pumped out of the column.

Properties of Hydrocarbons - CORRECT ANSWER -Long chain have:

high boiling points

low flammability

high viscosity

low volatility

a smoky flame

Short chain have:

low boiling points

high flammability

low viscosity

Chemistry E. W. Abel, 1987 Organometallic chemistry is an interdisciplinary science which continues to grow at a rapid pace. Although there is continued interest in synthetic and structural studies the last decade has seen a growing interest in the potential of organometallic chemistry to provide answers to problems in catalysis synthetic organic chemistry and also in the development of new materials. This Specialist Periodical Report aims to reflect these current interests reviewing progress in theoretical organometallic chemistry main group chemistry the lanthanides and all aspects of transition metal chemistry.

Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields, the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years, the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967, the whole spectrum of chemistry could no longer be contained within one volume, and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic, Organic, and Physical Chemistry. For more general coverage of the highlights in chemistry, they remain a must. Since that time, the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name, whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.
