Radiological Anatomy for FRCR Part 1 Philip Borg, Abdul Rahman Alvi, 2010-09-16. The new FRCR part 1 Anatomy examination comprises 20 cases, images with five questions about each. The cases are labelled 01 to 20 and the five questions are labelled a to e. The authors have set out to emulate this format by gathering 200 cases which from their experience are representative of the cases on which candidates will be tested. The book consists of 10 tests with 20 cases each and 5 stem questions each. The answers along with an explanation and tips accompany each test at the end of the chapter. This will help candidates to identify the level of anatomical knowledge expected by the Royal College of Radiologists. The aim of this book is not to replace the already available literature in radiological anatomy but to complement it as a revision guide. Whereas radiological anatomy atlases and textbooks provide images with labels for every possible identifiable structure in an investigation, the cases in this book have only 5 labels simulating the exam.

Body of Knowledge Steven Giegerich, 2001-09-09. A fascinating exploration of the medical student's most decisive course: gross anatomy and of the intellectual, emotional, and spiritual transformation that turns young men and women into doctors. Medical Gross and Developmental Anatomy is a course every medical student dreads. As one future physician told the author Steve Giegerich, passing the notoriously difficult course is paying your dues for medicine. It's the bridge you have to cross if you want to become a doctor. More students leave medical school during this course than any other. Now *Body of Knowledge* puts readers in the classroom as potential doctors come face-to-face with their first human cadaver and dissect the factors that determine whether they succeed or fail. In January 1999, 181 students at the University of Medicine and Dentistry, Newark, began a course in gross anatomy. Among them were Sherry Ikalowych, a former nurse and mother of four; Jennifer Hannum, an ultracompetitive jock; Udele Tagoe, a determined Duke graduate of Ghanaian descent; and Ivan Gonzalez, a Nicaraguan refugee and unlikely medical student. For these four lab partners, Tom Lewis, the cadaver lying on the stainless steel table, remains anonymous during dissection, but for the reader, Lewis springs to life. As the students grapple with love, hate, power, and awe, Giegerich explores Lewis's life and his generous decision to donate his body to science. Ultimately, as the students gain reverence for medicine, they too develop gratitude for Lewis's thoughtful gift.
