Davison, James Stewart, Bryan Ferroni, 2002      *A Student's Manual for A First Course in General Relativity* Robert B. Scott, 2016 This comprehensive student manual has been designed to accompany the leading textbook by Bernard Schutz *A First Course in General Relativity* and uses detailed solutions cross referenced to several introductory and more advanced textbooks to enable self learners undergraduates and postgraduates to master general relativity through problem solving The perfect accompaniment to Schutz's textbook this manual guides the reader step by step through over 200 exercises with clear easy to follow derivations It provides detailed solutions to almost half of Schutz's exercises and includes 125 brand new supplementary problems that address the subtle points of each chapter It includes a comprehensive index and collects useful mathematical results such as transformation matrices and Christoffel symbols for commonly studied spacetimes in an appendix Supported by an online table categorising exercises a Maple worksheet and an instructors manual this text provides an invaluable resource for all students and instructors using Schutz's textbook      *A First Course in Stochastic Calculus* Louis-Pierre Arguin, 2021-11-22 *A First Course in Stochastic Calculus* is a complete guide for advanced undergraduate students to take the next step in exploring probability theory and for master's students in mathematical finance who would like to build an intuitive and theoretical understanding of stochastic processes This book is also an essential tool for finance professionals who wish to sharpen their knowledge and intuition about stochastic calculus Louis Pierre Arguin offers an exceptionally clear introduction to Brownian motion and to random processes governed by the principles of stochastic calculus The beauty and power of the subject are made accessible to readers with a basic knowledge of probability linear algebra and multivariable calculus This is achieved by emphasizing numerical experiments using elementary Python coding to build intuition and adhering to a rigorous geometric point of view on the space of random variables This unique approach is used to elucidate the properties of Gaussian processes martingales and diffusions One of the book's highlights is a detailed and self contained account of stochastic calculus applications to option pricing in finance Louis Pierre Arguin's masterly introduction to stochastic calculus seduces the reader with its quietly conversational style even rigorous proofs seem natural and easy Full of insights and intuition reinforced with many examples numerical projects and exercises this book by a prize winning mathematician and great teacher fully lives up to the author's reputation I give it my strongest possible recommendation Jim Gatheral Baruch College I happen to be of a different persuasion about how stochastic processes should be taught to undergraduate and MA students But I have long been thinking to go against my own grain at some point and try to teach the subject at this level together with its applications to finance in one semester Louis Pierre Arguin's excellent and artfully designed text will give me the ideal vehicle to do so Ioannis Karatzas Columbia University New York      **Student Study Guide to Accompany A First Course in Complex Analysis with Applications**

pedagogies of their disciplines Nothing uncovers hidden assumptions about desired knowledge skills and dispositions better than a careful examination of our most cherished practices The authors inspire specialists in other disciplines to do the same Furthermore they invite other colleagues to explore whether relatively new interdisciplinary fields such as Women s Studies and Global Studies have or should have a signature pedagogy consistent with their understanding of what it means to apprentice in these areas Anthony A Ciccone Senior Scholar and Director Carnegie Academy for the Scholarship of Teaching and Learning How do individual disciplines foster deep learning and get students to think like disciplinary experts With contributions from the sciences humanities and the arts this book critically explores how to best foster student learning within and across the disciplines This book represents a major advance in the Scholarship of Teaching and Learning SoTL by moving beyond individual case studies best practices and the work of individual scholars to focus on the unique content and characteristic pedagogies of major disciplines Each chapter begins by summarizing the SoTL literature on the pedagogies of a specific discipline and by examining and analyzing its traditional practices paying particular attention to how faculty evaluate success Each concludes by articulating for its discipline the elements of a signature pedagogy that will improve teaching and learning and by offering an agenda for future research Each chapter explores what the pedagogical literature of the discipline suggests are the optimal ways to teach material in that field and to verify the resulting learning Each author is concerned about how to engage students in the ways of knowing the habits of mind and the values used by experts in his or her field Readers will not only benefit from the chapters most relevant to their disciplines As faculty members consider how their courses fit into the broader curriculum and relate to the other disciplines and design learning activities and goals not only within the discipline but also within the broader objectives of liberal education they will appreciate the cross disciplinary understandings this book affords
