CNC Machining Technology Graham T. Smith,2013-11-27 The first part of Volume I outlines the origins and development of CNC machine tools It explains the construction of the equipment and also discusses the various elements necessary to ensure high quality of production The second part considers how a company justifies the purchase of either cells or systems and illustrates why simulation exercises are essential prior to a full implementation Communication protocols as well as networking topologies are examined Finally the important high speed machining developments and the drive towards ultra high precision are mentioned Following a brief historical introduction to cutting tool development chapters 1 and 2 of Volume II explain why CNC requires a change in cutting tool technology from conventional methods A presentation is given of the working knowledge of cutting tools and cutting fluids which is needed to make optimal use of the productive capacity of CNC machines Since an important consideration for any machine tool is how one can locate and restrain the workpiece in the correct orientation and with the minimum of set up time chapter 3 is concerned with workholding technology Volume III deals with CNC programming It has been written in conjunction with a major European supplier of controllers in order to give the reader a more consistent and in depth understanding of the logic used to program such machines It explains how why and where to program specific features of a part and how to build them up into complete programs Thus the reader will learn about the main aspects of the logical structure and compilation of a program Finally there is a brief review of some of the typical controllers currently available from both universal and proprietary builders

Handbook of High-Speed Machining Technology Robert King,2013-03-08 The United States now spends approximately 115 billion annually to perform its metal removal tasks using conventional machining technology Of this total amount about 14 billion is invested in the aerospace and associated industries It becomes clear that metal removal technology is a very important candidate for rigorous investigation looking toward improvement of productivity within the manufacturing system To aid in this endeavor work has begun to establish a new scientific and technical base that will provide principles upon which manufacturing decisions may be based One of the metal removal areas that has the potential for great economic advantages is high speed machining and related technology This text is concerned with discussions of ways in which high speed machining systems can solve immediate problems of profiling pocketing slotting sculpturing facing turning drilling and thin walled sectioning Benefits to many existing programs are provided by aiding in solving a current management production problem that of efficiently removing large volumes of metal by chip removal The injection of new high rate metal removal techniques into conventional production procedures which have remained basically unchanged for a century presents a formidable systems problem both technically and managerially The proper solution requires a sophisticated difficult process whereby management worker relationships are reassessed age old machine designs reevaluated and a new vista of product process planning and design admitted **Reasoning from First Principles in**
