

Meiosis

How does sexual reproduction lead to genetic variation?

KEY

Why?

Cells reproduce through mitosis to make exact copies of the original cell. This is done for growth and repair. Sexually-reproducing organisms have a second form of cell division that produces reproductive cells with half the number of chromosomes. This process is called *meiosis*, and without it, humans, oak trees, bacteria, and all other sexually-reproducing organisms would be very different than they are today.

Model 1 – Meiosis I

1. According to Model 1, in what type of organism are the cells that enter meiosis I found?
Sex organs (ovaries and testes).
2. Considering what you already know about animals in cells, what events must take place during Anaphase I before a cell proceeds to division?
DNA replication.

Answer To Mitosis Packet
