The Shape of Algebra in the Mirrors of Mathematics Gabriel Katz, Vladimir Nodelman, 2012 The Shape of Algebra is the authors attempt to share their mathematical experiences with readers who have more than a passing interest in mathematics but have only a traditional exposure to elementary algebra Secondary school and college teachers and students who want to expand their horizons in the field will find a fresh presentation of familiar concepts and some unexpected results This book serves as a text for an appreciation course in modern mathematics designed for non

mathematics majors or for first year students who are considering the possibility of studying mathematics or related disciplines It can also serve as a source of computer supported activities that could supplement traditional courses in algebra multivariable calculus and complex variable This book gives the reader a sense of the visual nature of mathematics Mathematical experiments with universal mapping software VisuMatica designed by Vladimir Nodel man form the very core of the book Readers are encouraged to reproduce play with and expand on these experiments Numerous problems are interspersed throughout the text to guide the reader Our treatment of standard algebra is visual and computational By introducing visual computational environments like VisuMatica our book promotes this geometric approach to algebra and makes it accessible to readers a great deal earlier The book will enable our readers to approach its content on three levels the first one which requires only some fluency with elementary algebraic manipulations the second one which also presumes familiarity with the notions of derivatives and tangent lines to plane curves and the third one which uses some basic concepts of multivariable calculus All three levels are clearly marked in the text and will allow for a smooth reading and virtual experiments regardless of the level that our readers will find comfortable

Algebra and Geometry Hung-Hsi Wu,Hongxi Wu,2020-09-08 This is the second of three volumes that together give an exposition of the mathematics of grades 9 12 that is simultaneously mathematically correct and grade level appropriate The volumes are consistent with CCSSM Common Core State Standards for Mathematics and aim at presenting the mathematics of K 12 as a totally transparent subject The first part of this volume is devoted to the study of standard algebra topics quadratic functions graphs of equations of degree 2 in two variables polynomials exponentials and logarithms complex numbers and the fundamental theorem of algebra and the binomial theorem Having translations and the concept of similarity at our disposal enables us to clarify the study of quadratic functions by concentrating on their graphs the same way the study of linear functions is greatly clarified by knowing that their graphs are lines We also introduce the concept of formal algebra in the study of polynomials with complex coefficients The last three chapters in this volume complete the systematic exposition of high school geometry that is consistent with CCSSM These chapters treat the geometry of the triangle and the circle ruler and compass constructions and a general discussion of axiomatic systems including non Euclidean geometry and the celebrated work of Hilbert on the foundations This book should be useful for current and future teachers of K 12 mathematics as well as for some high school students and for education professionals
