Thinking Big Data in Geography Jim Thatcher, 2018 Thinking Big Data in Geography offers a practical state of the field overview of big data as both a means and an object of research with essays from prominent and emerging scholars such as Rob Kitchin, Renee Sieber and Mark Graham. Part 1 explores how the advent of geoweb technologies and big data sets has influenced some of geography's major subdisciplines: urban politics and political economy, human environment interactions and geographic information sciences. Part 2 addresses how the geographic study of big data has implications for other disciplinary fields, notably the digital humanities and the study of social justice. The volume concludes with theoretical applications of the geoweb and big data as they pertain to society as a whole, examining the ways in which user-generated data come into the world and are complicit in its unfolding. The contributors raise caution regarding the use of spatial big data, citing issues of accuracy, surveillance and privacy.

Every page presents inspiring examples of children's learning and explains how and why creative approaches such as enquiry learning, learning outside the classroom and using imaginative resources work so well in primary geography. Using illustrated case studies from a range of schools and classrooms, each chapter showcases the fantastic work all children can do in primary geography. The book explores a wide variety of geographical learning, with chapters focusing on key aspects of the subject, including primary geography through the school grounds, topical geography through issues and events, learning about places in primary geography, children's agency and action through primary geography. Throughout the chapters, the role of primary geography in helping children develop all types of literacies, including spatial, critical and digital literacies, is explored. College Admissions Data Sourcebook Midwest Edition , Caged Histories Andriani Fili, 2025-10-29 This book offers an unprecedented exploration of Greece s immigration detention system uncovering its hidden histories systemic violence and the struggles of those confined within its walls Drawing on over a decade of ethnographic research and personal experience as an NGO practitioner it exposes how detention has been used as a tool for border control racial exclusion and social punishment The book traces the evolution of Greece s detention system from its roots in the 1990s through the so called refugee crisis of 2015 to the present connecting these practices to broader European border policies Through vivid stories from detained people activists and practitioners the book documents acts of resistance inside detention centres and the solidarity movements that support them It highlights how state institutions including the police and NGOs sustain and legitimize violence under the guise of humanitarianism and security Engaging with abolitionist thought the book challenges the inevitability of detention calling for a future without cages It will resonate with readers interested in migration social justice and human rights offering a vital contribution to contemporary debates on borders confinement and resistance across Europe and beyond **Taking Chances** Karen M. O'Neill, Daniel J. Van Abs, 2016-06-03 Humanity is deeply committed to living along the world s shores but a catastrophic storm like Sandy which took hundreds of lives and caused many billions of dollars in damages shines a bright light at how costly and vulnerable life on a shoreline can be Taking Chances offers a wide ranging exploration of the diverse challenges of Sandy and asks if this massive event will really change how coastal living and development is managed Bringing together leading researchers including biologists urban planners utilities experts and climatologists among others Taking Chances illuminates reactions to the dangers revealed by Sandy Focusing on New Jersey New York and other hard hit areas the contributors explore whether Hurricane Sandy has indeed transformed our perceptions of coastal hazards if we have made radically new plans in response to Sandy and what we think should be done over the long run to improve coastal resilience Surprisingly one essay notes that while a large majority of New Jerseyans identified Sandy with climate change and favored carefully assessing the likelihood of damage from future storms before rebuilding the Shore their political leaders quickly poured millions into reconstruction Indeed much here is disquieting One

contributor points out that investors scared off from further investments on the shore are quickly replaced by new investors sustaining or increasing the overall human exposure to risk Likewise a study of the Gowanus Canal area of Brooklyn shows that even after Sandy swamped the area with toxic flood waters plans to convert abandoned industrial lots around the canal into high density condominiums went on undeterred By contrast utilities emergency officials and others who routinely make long term plans have changed operations in response to the storm and provide examples of adaptation in the face of climate change Will Sandy be a tipping point in coastal policy debates or simply dismissed as a once in a century anomaly This thought provoking collection of essays in *Taking Chances* makes an important contribution to this debate *Research in Education*, 1968-07 Low-Cost Carriers in Emerging Countries John Bowen, 2019-02-14 Low Cost Airline Carriers in Emerging Countries traces the development of low cost carriers LCCs in Asia Latin America the Middle East and Africa examining airlines that have become significant players in their home markets but little known at a global scale The book maps the geography of the LCC phenomenon explaining the starkly varying success of budget airlines and assessing their current social economic and environmental impacts The book concludes with insights into the future potential of the LCC phenomenon along with its global ramifications Beginning with Southwest Airlines in the 1970s low cost carriers LCCs have democratized air travel around the world fostering huge increases in airline traffic and transforming the airline industry At the same time however the ascent of these budget airlines has exacerbated aviation related problems such as aircraft noise airport congestion greenhouse gas emissions and more LCCs have been extensively studied in the US and Europe but not in emerging regions of the globe Yet the impact of such airlines is greatest in low and middle income economies where only a small fraction of the population has ever flown and where competition from alternative modes road rail is weak

Crisis and Class War in Egypt Sean F. McMahon,2016-10-15 In 2011 capital s crisis erupted in Egyptian society This eruption and subsequent politics have been misrepresented as revolutionary as the working class was and is increasingly so devalued and disempowered In Crisis and Class War in Egypt Sean F McMahon critically analyses Egypt s recent political history He argues that the so called revolution was the appearance of capital s destruction of the value of the Egyptian working class and an existential crisis for capital In response productive capital in the form of the military used disposed of and replaced its junior partners in governing first the predatory capital of the Mubarak state with the commodity capital of the Muslim Brotherhood and then commodity capital with the finance capital of the Gulf Cooperation Council These reconfigurations have been expressed in all manner of reactionary governmental arrangements including constitutions legislation and currency reform Extending today s analysis into the near future McMahon sees the war of Egyptian society intensifying and increasingly violent lives for Egyptian workers
