Farhad Ghassemi Tari, Ph.D., 2024-06-05 Farhad Ghassemi Tari was born in Tehran Iran He currently resides in Oxnard
California The author completed his Ph D program in Operations Research applied mathematical programming and
graduated from Texas A M University in 1980 Right after his graduation he started teaching at Sharif University of
Technology for thirty six years where he retired as an associate professor During this time he conducted research projects
and taught several undergraduate and graduate courses mostly in mathematical programming such as Linear Programming
Integer and Dynamic Programming Nonlinear Programming Sequencing and Scheduling and Quantitative Method in
Managerial Decision Making Tari has published more than eighty papers in scientific journals and has held conference
proceedings from the research results His hobbies include reading books and listening to classical music He also likes
cooking Mathematics I and its complement volume Intermediate Mathematics II systematically describe concepts and tools
that are crucial to every college student who are willing to attain solid base for more advance mathematical topics They aim
to give the reader a comprehensive view of mathematics its use and its role in computation These two books cooperatively
may be different than other mathematics textbooks Every chapter starts with a romantic poem Researchers have discovered
that contemplating poetic imagery and the multiple layers of meanings in poems activates specific areas of the brain that
help us to interpret our everyday reality In these books every topic is assisted by several examples After presentation of
concepts and tools each chapter is proceeded with different real life applications of the topics Finally each chapter concludes
with 60 multiple choice questions to attract deeper learning and understanding of the topics studied **High School**

Flow Processes in Faults and Shear Zones G. Ian Alsop, 2004 Faults and their deeper level equivalents shear zones are localized regions of intense deformation within the Earth They are recognized at all scales from micro to plate boundary and are important examples of the nature of heterogeneous deformation in natural rocks Faults and shear zones are significant as they profoundly influence the location architecture and evolution of a broad range of geological phenomena The topography and bathymetry of the Earth's surface is marked by mountain belts and sedimentary basins that are controlled by faults and shear zones In addition faults and shear zones control fluid migration and transport including hydrothermal and hydrocarbon systems Once faults and shear zones are established they are often long lived features prone to multiple reactivation over very large time scales This collection of papers addresses lithospheric deformation and the rheology of shear zones together with processes of partitioning and the unravelling of fault and shear zone histories

Geological Mapping of Our World and Others Robert W. H. Butler, Taija Torvela, Laura M. Williams, 2024-04-23 Map making is a fundamental tool for developing geological knowledge It involves data collection and interpretation and has its roots in the earliest discoveries in Earth science It is the starting point for stratigraphic and structural interpretations metamorphic facies geochronology and modelling studies and underpins civil engineering From the beginning geological mapping rapidly evolved into far more than being a simple spatial catalogue of observable rock types and landforms on the Earth's land surface deductive reasoning allows this knowledge to infer subsurface Earth structure However the same approaches have also been down scaled to deduce processes on the grain scale or up scaled to look out to extraterrestrial objects This Special Publication draws

together these strands crossing geoscience disciplines and observation scales to celebrate geological mapping its historical importance and future directions and its use in applied geology together with developing knowledge of Earth and planetary evolution and processes

Geometry Illuminated Matthew Harvey, 2015-09-25 Geometry Illuminated is an introduction to geometry in the plane both Euclidean and hyperbolic It is designed to be used in an undergraduate course on geometry and as such its target audience is undergraduate math majors However much of it should be readable by anyone who is comfortable with the language of mathematical proof Throughout the goal is to develop the material patiently One of the more appealing aspects of geometry is that it is a very visual subject This book hopes to take full advantage of that with an extensive use of illustrations as guides Geometry Illuminated is divided into four principal parts Part 1 develops neutral geometry in the style of Hilbert including a discussion of the construction of measure in that system ultimately building up to the Saccheri Legendre Theorem Part 2 provides a glimpse of classical Euclidean geometry with an emphasis on concurrence results such as the nine point circle Part 3 studies transformations of the Euclidean plane beginning with isometries and ending with inversion with applications and a discussion of area in between Part 4 is dedicated to the development of the Poincaré disk model and the study of geometry within that model While this material is traditional Geometry Illuminated does bring together topics that are generally not found in a book at this level Most notably it explicitly computes parametric equations for the pseudosphere and its geodesics It focuses less on the nature of axiomatic systems for geometry but emphasizes rather the logical development of geometry within such a system It also includes sections dealing with trilinear and barycentric coordinates theorems that can be proved using inversion and Euclidean and hyperbolic tilings
