Bridging Research and Practice in Science Education Eilish McLoughlin, Odilla E. Finlayson, Sibel Erduran, Peter E. Childs, 2019-08-27 This edited volume presents innovative current research in the field of Science Education. The chapters deal with a wide variety of topics and research approaches conducted in a range of contexts and settings. Together they make a strong contribution to knowledge on science teaching and learning. The book consists of selected presentations from the 12th European Science Education Research Association ESERA Conference held in Dublin, Ireland, from 21st to 25th August 2017. The ESERA community is made up of professionals with diverse disciplinary backgrounds from natural sciences to social sciences. This diversity enables a rich understanding of cognitive and affective aspects of science teaching and learning. The studies in this book will stimulate discussion and interest in finding new ways of implementing and researching science education for the future. The twenty-two chapters in this book are presented in four parts highlighting innovative approaches to school science, emerging identities in science education, approaches to developing learning and competence progressions, and ways of enhancing science teacher education. This collection of studies showcases current research orientations in science education and is of interest to science teachers, teacher educators, and science education researchers around the world with a commitment to bridging research and practice in science teaching and learning. *Science Education in East Asia* Myint Swe Khine, 2015-09-03 This book presents innovations in teaching and learning science, novel approaches to science curriculum, cultural and contextual factors in promoting science education, and improving the standard and achievement of students in East Asian countries. The authors in this book discuss education reform and science curriculum changes and promotion of science and STEM education, parental roles and involvement in children's education, teacher preparation and professional development, and research in science education in the context of international benchmarking tests to measure the knowledge of mathematics and science, such as the Trends in Mathematics and Science Study (TIMSS) and achievement in science, mathematics, and reading like Programme for International Student Assessment (PISA). Among the high-achieving countries, the performance of the students in East Asian countries such as Singapore, Taiwan, Korea, Japan, Hong Kong, and China (Shanghai) are notable. This book investigates the reasons why students from East Asian countries consistently claim the top places in each and every cycle of those studies. It brings together prominent science educators and researchers from East Asia to share their experience and findings, reflection, and vision on emerging trends, pedagogical innovations, and research-informed practices in science education in the region. It provides insights into effective educational strategies and development of science education to international readers.
