Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems. Thus it is par excellence a model of rational inquiry. Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades. Indeed, the Enlightenment view of the rational human mind that reasons, makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century. Cognitive psychologists discovered that humans' thoughts and actions often deviate from rules imposed by strict normative theories of inference. Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats. Humans, as the cognitive psychologist and economist Herbert Simon claimed, do not usually optimize but rather satisfice even when solving a problem. This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education. We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program. In Simon's bounded rationality and its direct descendant ecological rationality, rationality is understood in terms of cognitive success in the world: correspondence rather than in terms of conformity to content-free norms of coherence, e.g. transitivity.

Higher grounds Patience Adjekai Sowa, PhD, Rachel Jordan, Wendi Ralaingita, Benjamin Piper, 2021-05-23 To address chronically low primary school completion rates and the disconnect between learners' skills at the end of primary school and the skills learners need to thrive in secondary school, identified in many low and middle income countries, more investment is needed to improve the quality of teaching and learning in upper primary grades. Accordingly, we provide guidelines for improving five components of upper primary education: 1. In-service teacher professional development and pre-service preparation to improve and enhance teacher quality; 2. a focus on mathematics literacy and core content area subjects; 3. assessment for learning; 4. high quality teaching and learning materials; and 5. positive school climates. We provide foundational guiding principles and recommendations for intervention design and implementation for each component. Additionally, we discuss and propose how to structure and design pre-service teacher preparation and in-service teacher training and ongoing support, fortified by materials design and assessment to help teachers determine where learners are in developmental progressions, move learners towards mastery and differentiate and support learners who have fallen behind. We provide additional suggestions for integrating a whole school climate, curriculum, social emotional learning and school-related gender-based violence prevention strategies to address the internal and societal changes learners often face as they
