

Proving Lines Parallel Worksheet

Read the following theorems carefully:

- ① If two lines are cut by a transversal such that the corresponding angles are equal, then the lines are parallel.
- ② If two lines are cut by a transversal such that the alternate interior angles are equal, then the lines are parallel.
- ③ If two lines are cut by a transversal such that the alternate exterior angles are equal, then the lines are parallel.
- ④ If two lines are cut by a transversal such that the co-interior angles are supplementary, then the lines are parallel.

Use the above chart and complete the table below.

Relations between Angles	Name the Transversal and Parallel Lines (or write 'none')	Reason (write the appropriate theorem number)
$m\angle 7 + m\angle 14 = 180^\circ$	line b, $r \parallel s$	Theorem ④
$\angle 12 = \angle 14$		
$\angle 3 = \angle 11$		
$m\angle 8 + m\angle 10 = 180^\circ$		
$\angle 5 = \angle 15$		
$\angle 7 = \angle 10$		
$\angle 4 = \angle 10$		
$m\angle 3 + m\angle 8 = 180^\circ$

A Beginner's Guide to Discrete Mathematics W.D. Wallis, 2013-03-14 This text is a basic introduction to those areas of discrete mathematics used by students of mathematics and computer science Introductory courses on this material are now standard at many colleges and universities Usually these courses are of one semester's duration and usually they are offered at the sophomore level Very often this will be the first course where the students see several real proofs The preparation of the students is very mixed and one cannot assume a strong background In particular the instructor should not assume that the students have seen a linear algebra course or any introduction to number systems that goes beyond college algebra In view of this I have tried to avoid too much sophistication while still retaining rigor I hope I have included enough problems so that the student can reinforce the concepts Most of the problems are quite easy with just a few difficult exercises scattered through the text If the class is weak a small number of sections will be too hard while the instructor who has a strong class will need to include some supplementary material I think this is preferable to a book at a higher mathematical level which will scare away weaker students
