This book is an introduction level text that reviews, discusses and integrates both theoretical and practical corporate analysis and planning. The field can be divided into five parts: 1. Information and Methodology for Financial Analysis, 2. Alternative Finance Theories and Cost of Capital, 3. Capital Budgeting and Leasing Decisions, 4. Corporate Policies and their Interrelationships, 5. Financial Planning and Forecasting. The theories used and discussed in this book can be grouped into the following classical theoretical areas of corporate finance: 1. Pre-M and alternative planning and forecasting models are used to show how the interdisciplinary approach can be used to make meaningful financial management decisions. In this third edition, we have extensively updated and expanded the topics of financial analysis, planning and forecasting. New chapters were added and some chapters combined to present a holistic view of the subject and much of the data revised and updated.

Positive Alpha Generation Claude Diderich, 2009-02-18. Diderich describes tools and techniques which can be used to develop quantitative models for actively managing investment products and focuses on how theoretical models can and should be used in practice. He describes the interaction between different elements of an investment process's value chain in a single and consistent framework. A key focus is placed on illustrating the theory with real world examples. At the end of the book, the reader will be capable of designing or enhancing an investment process for an investment or portfolio manager's products from start to finish. Increased pressure to add value through investments makes this a hot topic in the investment world. Combined theoretical and practical approach makes this book appealing to a wide audience of quants and investors.
