Geotechnical Problem Solving John C. Lommler, 2012-01-26 Devised with a focus on problem solving Geotechnical Problem Solving bridges the gap between geotechnical and soil mechanics material covered in university Civil Engineering courses and the advanced topics required for practicing Civil Structural and Geotechnical engineers By giving newly qualified engineers the information needed to apply their extensive theoretical knowledge and informing more established practitioners of the latest developments this

book enables readers to consider how to confidently approach problems having thought through the various options available. Where various competing solutions are proposed the author systematically leads through each option weighing up the benefits and drawbacks of each to ensure the reader can approach and solve real world problems in a similar manner. The scope of material covered includes a range of geotechnical topics such as soil classification, soil stresses and strength and soil self weight settlement. Shallow and deep foundations are analyzed including special articles on laterally loaded piles retaining structures including MSE and Tieback walls, slope and trench stability for natural cut and fill slopes, geotechnical uncertainty and geotechnical LRFD Load and Resistance Factor Design.

On the basis of the boundary element method, new techniques and effective computing algorithms are considered. Special attention is given to the formulation and analysis of the spatial contact models for elastic bases. Besides the classical schemes of contact deformation, new contact models are discussed for spatially nonhomogeneous and nonlinearly elastic media properly describing soil properties. *Unsaturated Soil Mechanics in Geotechnical Practice* Geoffrey E. Blight, 2013-07-11 There are other books on unsaturated soil mechanics but this book is different. Unsaturated soil mechanics is only one aspect of a continuous range of soil mechanics studies that extends from the rheology of high water content soil slurries to the mechanics of soft soils to stiff saturated soils to unsaturated soils and at the far end of the range. **Applied Mechanics Reviews**, 1973
