

5.2 Practice A

Tell which equation you would choose to solve for one of the variables when solving the system by substitution. Explain your reasoning.

1. $y = 5x - 2$

$2x + 9y = 10$

2. $3x - 7y = 12$

$3x - 12y = 6$

3. $\frac{1}{5}x + y = 8$

$4x - 3y = 1$

Solve the system of linear equations by substitution. Check your solution.

4. $y = x + 3$

$y = 5x - 5$

5. $y = 3x - 1$

$y = x - 7$

6. $x = 5y + 2$

$x - 4y = 5$

7. The gym has a total of 25 treadmills and stationary bikes. There are 7 more stationary bikes than treadmills.

- Write a system of linear equations that represents this situation.
- How many treadmills are in the gym?
- How many stationary bikes are in the gym?

Solve the system of linear equations by substitution. Check your solution.

8. $x - y = 9$

$2x + 5y = 4$

9. $2x + 3y = 25$

$4x - y = 15$

10. $3x - 6y = 2$

$4x + 3y = -1$

11. A drawer contains 24 spoons and forks. There are three times as many spoons as forks.

- Write a system of linear equations that represents this situation.
- How many spoons are in the drawer?
- How many forks are in the drawer?

12. The perimeter of a rectangle is 34 centimeters. The length is two more than twice the width. Write and solve a system of linear equations to find the length and the width of the rectangle.

13. A parking lot has a total of 60 cars and trucks. The ratio of cars to trucks is 7 : 3. How many cars are in the parking lot? How many trucks are in the parking lot? Justify your answers.

Vector Robyn Arianrhod,2024-05-29 A celebration of the seemingly simple idea that allowed us to imagine the world in new dimensions sparking both controversy and discovery The stars of this book vectors and tensors are unlikely celebrities If you ever took a physics course the word vector might remind you of the mathematics needed to determine forces on an amusement park ride a turbine or a projectile You might also remember that a vector is a quantity that has magnitude and this is the key direction In fact vectors are examples of tensors which can represent even more data It sounds simple enough and yet as award winning science writer Robyn Arianrhod shows in this riveting story the idea of a single symbol expressing more than one thing at once was millennia in the making And without that idea we wouldn't have such a deep understanding of our world Vector and tensor calculus offers an elegant language for expressing the way things behave in space and time and Arianrhod shows how this enabled physicists and mathematicians to think in a brand new way These include James Clerk Maxwell when he ushered in the wireless electromagnetic age Einstein when he predicted the curving of space time and the existence of gravitational waves Paul Dirac when he created quantum field theory and Emmy Noether when she connected mathematical symmetry and the conservation of energy For it turned out that it's not just physical quantities and dimensions that vectors and tensors can represent but other dimensions and other kinds of

information too This is why physicists and mathematicians can speak of four dimensional space time and other higher dimensional spaces and why you re likely relying on vectors or tensors whenever you use digital applications such as search engines GPS or your mobile phone In exploring the evolution of vectors and tensors and introducing the fascinating people who gave them to us Arianrhod takes readers on an extraordinary five thousand year journey through the human imagination She shows the genius required to reimagine the world and how a clever mathematical construct can dramatically change discovery s direction *Hearing on the Reauthorization of the National Endowment for the Arts* United States.
