Time-Frequency Analysis and Synthesis of Linear Signal Spaces Franz Hlawatsch, 2013-03-14 Linear signal spaces are of fundamental importance in signal and system theory communication theory and modern signal processing This book proposes a time frequency analysis of linear signal spaces that is based on two novel time frequency representations called

the Wigner distribution of a linear signal space and the ambiguity function of a linear signal space Besides being a useful display and analysis tool the Wigner distribution of a linear signal space allows the design of high resolution time frequency filtering methods This book develops such methods and applies them to the enhancement decomposition estimation and detection of noisy deterministic and stochastic signals Formulation of the filtering estimation detection methods in the time frequency plane yields a direct interpretation of the effect of adding or deleting information changing parameters etc In a sense the prior information and the signal processing tasks are brought to life in the time frequency plane The ambiguity function of a linear signal space on the other hand is closely related to a novel maximum likelihood multipulse estimator of the range and Doppler shift of a slowly fluctuating point target an estimation problem that is important in radar and sonar Specifically the ambiguity function of a linear signal space is relevant to the problem of optimally designing a set of radar pulses The concepts and methods presented are amply illustrated by examples and pictures Time Frequency Analysis and Synthesis of Linear Signal Spaces Time Frequency Filters Signal Detection and Estimation and Range Doppler Estimation is an excellent reference and may be used as a text for advanced courses covering the subject

Khalid Jawed,Alyssa Novelia,Oliver M. O'Reilly,2018-05-04 This primer discusses a numerical formulation of the theory of an elastic rod known as a discrete elastic rod that was recently developed in a series of papers by Mikl s Bergou et al Their novel formulation of discrete elastic rods represents an exciting new method to simulate and analyze the behavior of slender bodies that can be modeled using an elastic rod The formulation has been extensively employed in computer graphics and is highly cited In the primer we provide relevant background from both discrete and classical differential geometry so a reader familiar with classic rod theories can appreciate comprehend and use Bergou et al s computational efficient formulation of a nonlinear rod theory The level of coverage is suitable for graduate students in mechanics and engineering sciences **North Sea Oil and Gas Reservoirs—II** A.T. Buller,2012-12-06 The first North Sea Oil and Gas Reservoirs Conference was held in Trondheim in 1985 as part of the Norwegian Institute of Technology s 75th anniversary celebrations Favourable reactions from the delegates prompted the Committee to re run the event some three and a half years later and it is now intended that the Conference be held on a regular basis as long as there is a demand for this type of gathering The objectives of the 1989 Conference which were broadly similar to those of the previous one were a to bring together those engaged in various geoscientific and reservoir engineering aspects of North Sea Oil and gas reservoirs in one forum b to demonstrate wherever possible the interdependence of the various disciplines and specializations c to promote innovative synergistic approaches to research and development programmes aimed at North Sea conditions and d to reflect current trends in the reservoir sciences Naturally there was no place for specialist parallel sessions in a Conference aimed at encouraging interdisciplinary integration and awareness Mathematical Models Gerd Fischer,2017-09-04 This book presents beautiful photos of mathematical models of geometric surfaces made from a variety of materials including plaster metal paper wood and string The construction of these models at the time of Felix Klein and others was not an end in itself but was accompanied by mathematical research especially in the field of algebraic geometry The models were used to illustrate the mathematical objects defined by abstract formulas either as equations or parameterizations In the second part of the book the models are

Vinay, 2003-06-30 This volume contains the proceedings of the 21st international conference on the Foundations of Software Technology and Theoretical Computer Science FSTTCS 2001 organized under the auspices of the Indian Association for Research in Computing Science IARCS This year's conference attracted 73 submissions from 20

countries Each s mission was reviewed by at least three independent referees In a departure from previous conferences the national selection of the papers making up the program was done through an electronic discussion spanning two weeks without a physical meeting of the Program Committee PC Since the PC of FSTTCS is distributed across the globe it is very difficult to have a meeting whose time and venue is convenient for a substantial fraction of the PC Given this it was felt that an electronic discussion would enable all members to participate on a more equal footing in the national selection All reviews scores and comments were posted on a secure website with a mechanism for making updates and automatically sending notifications by email to relevant members of the PC All PC members participated actively in the discussion The general feedback on the arrangement was very positive so we hope to continue this in future years We have invited speakers this year Eric Allender Sanjeev Arora David Harel Colin Stirling and Uri Zwick We thank them for having readily accepted our invitation to talk at the conference and for providing abstracts and even full papers for the proceedings **Mind Design III** John
