1. A _____ quantity is completely described by magnitude alone. A _____ quantity is completely described by a magnitude with a direction.
 a. scalar, vector b. vector, scalar
2. Speed is a _____ quantity and velocity is a _____ quantity.
 a. scalar, vector b. vector, scalar

Speed vs. Velocity

Speed and velocity are two quantities in Physics which seem at first glance to have the same meaning. While related, they have distinctly different definitions. Knowing their definitions is critical to understanding the difference between them.

Speed is a quantity which describes how fast or how slow an object is moving.

Velocity is a quantity which is defined as the rate at which an object's position changes.

3. Suppose you are considering three different paths (A, B and C) between the same two locations.

Along which path would you have to move with the greatest speed to arrive at the destination in the same amount of time? Explain.

4. True or False: It is possible for an object to move for 10 seconds at a high speed and end up with no overall change in position.

a. True b. False
5. If the above statement is true, then describe an example of such a motion. If the above statement is false, then explain why it is false.

6. Suppose that you run for 10 seconds along three different paths.

Rank the three paths from the lowest speed to the greatest speed. _____

Rank the three paths from the lowest velocity to the greatest velocity. _____

Bernardini,C. Tarsitani,M. Vicentini,2012-12-06 The research in Physics Education has to do with the search of solutions to the complex problem of how to improve the learning and teaching of physics The complexity of the problem lies in the different fields of knowledge that need to be considered in the research In fact besides the disciplinary knowledge in physics which must be considered from the conceptual the historical and the epistemological framework one has to take into account some basic knowledge in the context of psychology and the cognitive sciences for the general and contextual aspects of learning and some basic knowledge in education and communication for what concerns teaching skills and strategies Looking back at the historical development of the research one may recognize that the complexity of the endeavour was not clear at first but became clear in its development which shifted the focus of the research in the course of time from physics to learning to teaching We may say that the research started more than 30 years ago with a focus on disciplinary knowledge Physicists in different parts of the western world after research work in some field of physics decided to concentrate on the didactical communication of physical knowledge *Student Study Guide & Selected Solutions Manual* David D.
