Arena Simulation Complete Manual:

Simulation Modeling Handbook Christopher A. Chung, 2003-07-15 The use of simulation modeling and analysis is becoming increasingly more popular as a technique for improving or investigating process performance This book is a practical easy to follow reference that offers up to date information and step by step procedures for conducting simulation studies It provides sample simulation project support materi **The Arena** ,1899 Work Zone Simulation Model T. H. Maze, Ali Kamyab, 1999 To support the analysis of driver behavior at rural freeway work zone lane closure merge points Center for Transportation Research and Education staff collected traffic data at merge areas using video image processing technology The collection of data and the calculation of the capacity of lane closures are reported in a companion report Traffic Management Strategies for Merge Areas in Rural Interstate Work Zones These data are used in the work reported in this document and are used to calibrate a microscopic simulation model of a typical Iowa rural freeway lane closure The model developed is a high fidelity computer simulation with an animation interface It simulates traffic operations at a work zone lane closure This model enables traffic engineers to visually demonstrate the forecasted delay that is likely to result when freeway reconstruction makes it necessary to close freeway lanes Further the model is also sensitive to variations in driver behavior and is used to test the impact of slow moving vehicles and other driver behaviors This report consists of two parts The first part describes the development of the work zone simulation model The simulation analysis is calibrated and verified through data collected at a work zone in Interstate Highway 80 in Scott County Iowa The second part is a user s manual for the simulation model which is provided to assist users with its set up and operation No prior computer programming skills are required to use the simulation model *Simulation Modeling and Analysis* Averill M. Proceedings of the 2003 International Symposium on Collaborative Technologies and Systems ,2002 Phase II Helmut T. Zwahlen,2009 This project contains three major parts In the first part a digital computer simulation model was developed with the aim to model the traffic through a freeway work zone situation The model was based on the Arena simulation software and used cumulative interarrival times as the input Its aim was to determine the traffic volumes through the work zone and the queue lengths in advance of lane restrictions The program was designed to handle up to 15 miles in length up to six lanes and up to 20 entrance and exit ramps The developed program has not been validated due to the lack of reliable field data and the program appears to produce unreasonably short queue lengths and low exit ramp traffic counts compared to the input traffic data for cases where the exit ramps are spaced closely together In the second part a diversion analysis was performed to determine the effects of closed ramps The work zone sites were assigned by Ohio Department of Transportation and the diversion effects for these situations were in one case very minimal and in the other case as expected traffic shifted to the next open exit ramp In the third part guidelines for ramp management and ramp metering were established on a 24 7 basis giving special considerations to freeway mainline throughput and local traffic access to freeway
