Mastery of quality health care and patient safety begins as soon as we open the hospital doors for the first time and start acquiring practical experience. The acquisition of such experience includes much more than the development of sensorimotor skills and basic knowledge of sciences. It relies on effective reason, decision making, and communication shared by all health professionals including physicians, nurses, dentists, pharmacists, and administrators. *How to Think in Medicine: Reasoning, Decision Making, and Communications in Health Sciences* is about these essential skills. It describes how physicians and health professionals reason, make decisions, and practice medicine. This book provides a step-by-step breakdown of the reasoning process for clinical work and clinical care. It examines both the general and medical ways of thinking, reasoning, argumentation, fact-finding, and using evidence. It explores the principles of formal logic as applied to clinical problems and the use of evidence in logical reasoning.
