**Feminist in a Software Lab** Tara McPherson, 2018-02-19 For over a dozen years the Vectors Lab has experimented with digital scholarship through its online publication Vectors and through Scalar a multimedia authoring platform The history of this software lab intersects a much longer tale about computation in the humanities as well as tensions about the role of theory in related projects Tara McPherson considers debates around the role of cultural theory within the digital humanities and addresses Gary Hall's claim that the goals of critical theory and of quantitative or computational analysis may be irreconcilable or at the very least require far more time and care She then asks what it might mean to design from conception digital tools and applications that emerge from contextual concerns of cultural theory and in particular from a feminist concern for difference This path leads back to the Vectors Lab and its ongoing efforts at the intersection of theory and praxis

**Reversible Logic Synthesis Methodologies with Application to Quantum Computing** Saleem Mohammed Ridha Taha, 2015-09-24 This book opens the door to a new interesting and ambitious world of reversible and quantum computing research It presents the state of the art required to travel around that world safely Top world universities companies and government institutions are in a race of developing new methodologies algorithms and circuits on reversible logic quantum logic reversible and quantum computing and nano technologies In this book twelve reversible logic synthesis methodologies are presented for the first time in a single literature with some new proposals Also the sequential

reversible logic circuitries are discussed for the first time in a book Reversible logic plays an important role in quantum computing Any progress in the domain of reversible logic can be directly applied to quantum logic One of the goals of this book is to show the application of reversible logic in quantum computing A new implementation of wavelet and multiwavelet transforms using quantum computing is performed for this purpose Researchers in academia or industry and graduate students who work in logic synthesis quantum computing nano technology and low power VLSI circuit design will be interested in this book *Journal of Southeast University*,2007 *Light, Paper, Process* Virginia Heckert,2015-04-14 From its beginnings photography has been shaped by the desire to understand and explore the essence of the medium Light Paper Process features the work of seven artists Alison Rossiter Marco Breuer James Welling Lisa Oppenheim Chris McCaw John Chiara and Matthew Brandt who investigate the possibilities of analog photography by finding innovative surprising and sometimes controversial ways to push light sensitive photographic papers and chemical processing beyond their limits A panoply of practices emerges in the work of these artists Some customize cameras with special lenses or produce images on paper without a camera or film Others load paper rather than film in the camera or create contact printing with sources of light other than the enlarger while still others use expired photographic papers and extraneous materials such as dust and sweat selected to match the particular subject of the photograph All of the artists share a willingness to embrace accident and chance Trial and error contribute to an understanding of the materials and their potential as do the attitudes of underlying curiosity and inventive interrogation The act of making each image is like a performance with only the photographer present The results are stunning This lavish publication accompanies an eponymous exhibition on view at the J Paul Getty Museum from April 14 to September 6 2015 *Truckee Meadows, Nevada* United States. Office of the Assistant Secretary of the Army (Civil Works),2015 *Advances in Visual Computing* George Bebis,Richard Boyle,Bahram Parvin,Darko Koracin,Daniela Ushizima,Sek Chai,Shinjiro Sueda,Xin Lin,Aidong Lu,Daniel Thalmann,Chaoli Wang,Panpan Xu,2019-10-25 This book constitutes the refereed proceedings of the 14th International Symposium on Visual Computing ISVC 2019 held in Lake Tahoe NV USA in October 2019 The 100 papers presented in this double volume were carefully reviewed and selected from 163 submissions The papers are organized into the following topical sections Deep Learning I Computer Graphics I Segmentation Recognition Video Analysis and Event Recognition Visualization ST Computational Vision AI and Mathematical methods for Biomedical and Biological Image Analysis Biometrics Virtual Reality I Applications I ST Vision for Remote Sensing and Infrastructure Inspection Computer Graphics II Applications II Deep Learning II Virtual Reality II Object Recognition Detection Categorization and Poster *Genome wide association studies and genomic selection for crop improvement in the era of big data* Nunzio D'Agostino,Alison Bentley,Charles Chen,2023-05-05 **Logic Functions and Equations** Bernd Steinbach,Christian Posthoff,2022-06-06 The greatly expanded and updated 3rd edition of this textbook offers the reader a comprehensive introduction to the concepts of logic functions and equations and their

applications across computer science and engineering The authors approach emphasizes a thorough understanding of the fundamental principles as well as numerical and computer based solution methods The book provides insight into applications across propositional logic binary arithmetic coding cryptography complexity logic design and artificial intelligence Updated throughout some major additions for the 3rd edition include a new chapter about the concepts contributing to the power of XBOOLE a new chapter that introduces into the application of the XBOOLE Monitor XBM 2 many tasks that support the readers in amplifying the learned content at the end of the chapters solutions of a large subset of these tasks to confirm learning success challenging tasks that need the power of the XBOOLE software for their solution The XBOOLE monitor XBM 2 software is used to solve the exercises in this way the time consuming and error prone manipulation on the bit level is moved to an ordinary PC more realistic tasks can be solved and the challenges of thinking about algorithms leads to a higher level of education

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

*Formal Methods in Computer-Aided Design* Warren A. Jr. Hunt, Steven D. Johnson, 2007-11-29 The biannual Formal Methods in Computer Aided Design conference FMCAD 2000 is the third in a series of conferences under that title devoted to the use of discrete mathematical methods for the analysis of computer hardware and so ware The work reported in this book describes the use of modeling languages and their associated automated analysis tools to specify and verify computing systems Functional verification has become one of the principal costs in a modern computer design effort In addition verification of circuit models timing power etc requires even

more over FMCAD provides a venue for academic and industrial researchers and practitioners to share their ideas and experiences of using discrete mathematical modeling and verification It is noted with interest by the conference chairmen how this area has grown from just a few people 15 years ago to a vibrant area of research development and deployment It is clear that these methods are helping reduce the cost of designing computing systems As an example of this potential cost reduction we have invited David Russino of Advanced Micro Devices Inc to describe his verification of floating point algorithms being used in AMD microprocessors The program includes 30 regular presentations selected from 63 submitted papers

*Visual Languages for Interactive Computing: Definitions and Formalizations* Ferri, Fernando, 2007-08-31 Presents problems and methodologies related to the syntax semantics and ambiguities of visual languages Defines and formalizes visual languages for interactive computing as well as visual notation interpretation
