Procedures Robert A. Morgan, Eric Walser, 2010-01-19 Despite the fact that Interventional Radiology is steadily moving toward a clinical specialty with the need for broad medical training daily craftsmanship will always remain fundamental to what an interventional radiologist does Without basic catheter and wire skills IR would not be what it is today When I watch experienced colleagues work I am always surprised to see that concerning the technique and the materials we all make the same choices There is apparently a common IR skill which is universal and can be learned with experience I always see this with new IR fellows that it takes time to step away from improvising and letting the procedure take the lead to logic and standardized control over a procedure Choosing the right materials for the right job and building a level of confidence with these materials is a very important part of any IR fellowship Why can a supervisor get a stable catheter position with a new wire in no time whereas the fellow almost gives up The difference is knowing your materials for this specific indication and combining routine and standardized operational procedures Hands on workshops are always very popular at every IR meeting because one can really learn about basic skills Lectures with the title How I do it can always count on a full audience

A comprehensive evaluation of the clinical usefulness of QCA is covered from the fundamental principles through experimental validation studies application to clinical trials of a wide range of pharmacological and interventional therapies in the full spectrum of clinical presentation of coronary disease syndromes evaluation of the therapeutic efficacy of various new devices for coronary intervention together with extensive presentation of its physiological functional and anatomical correlations by comparison with other intracoronary measurement and imaging techniques. In addition evolving theories and concepts in the ever topical restenosis phenomenon after percutaneous intervention based on serial QCA studies are presented and discussed and a potentially unifying methodological approach to further study of this ubiquitous problem is offered.
