Should Animal Experimentation Be Abandon?

Animal Experimentation, also known as animal testing, is the use of animals to conduct experiments or do research in the laboratory. The number of animals used in experiments increased dramatically after World War II. Nowadays, animal experimentation is widely used in many areas such as medical research, behavior study, and drug tests. It is estimated that scientists in America utilize more than 15 million animals each year in their research. Also, animal research and testing is used in almost 10% of all biomedical research. ("Animal experimentation", 2011, para.4) While some people insist animal experimentation is necessary for social progress due to its unique contributions to human health and scientific researches, opponents of animal research argue that it is cruel, immoral, and unnecessary.

As a matter of fact, animal experimentation has been a controversy issue for a very long time. At the same time, there are an increasing number of regulations which restrict animal testing to some extent in order to protect animals' rights. From my perspective, animal experimentation should be abandoned because of its inhuman cruelty, moral issues, and the existence of possible alternatives. The most common arguments supporting animal experimentation can be refuted and shown to be unnecessary harm to animals. There are many arguments to support animal experimentation. Supporters of animal testing assert animal experimentations are beneficial for human health and vital for research purposes. Also, supporters tend to believe that there are no effective alternatives for animal experimentation.

One of the most common opinions supporters of animal experimentation hold is that a lot of animal experimentations are conducted for human health. They assert animal testing is critical for drug development, the safety of cosmetic...
