Jean-Marc Lawton

2014 Gce Physics Practical:

Designing Education Policy for Sub-Saharan African Countries Elizabeth Bifuh-Ambe, 2025-01-13 Designing Education Policy for Sub Saharan African Countries is the culmination of five years of extensive research and analysis of global educational systems as they compare with the challenges and opportunities in Sub Saharan Africa with a lens on Southern Cameroons As African youths demonstrate purpose and a desire for sovereignty and self governance quality education remains critical in realizing these aspirations Drawing from over 35 years of experience as an educator on various continents Elizabeth Bifuh Ambe courageously confronts the complex interactions of education with colonialism and other systems that perpetuate inequalities within the continent She highlights the transformative power of education as a source of cultural pride and a conduit for socio economic development that is essential if Africa must break free from historical patterns of dependency in the ongoing fight for genuine independence

Science Identities Henriette Tolstrup Holmegaard, Louise Archer, 2023-01-23 This edited volume brings together a state of the art collection of leading and emergent research on the burgeoning topic of science identities It sets out how science identity can be productively used as a lens in understanding patterns and inequalities in science participation across different educational and international contexts Its chapters reveal how intersections of social identities and inequalities shape participation and engagement in science Particular attention is given to explicating issues of theory and method identifying the potential and limitations of approaches and lacunae in existing knowledge The book showcases research from a range of disciplinary areas employing diverse methodological and conceptual approaches to investigate science identities across different fields and settings The collection offers a rich and comprehensive understanding of how science identity can be used conceptually methodologically and analytically to understand how learners and teachers relate to and make sense of science It s a valuable resource for students researchers and academics in the field of science education and anyone who is interested in identity and education

Johnstone Triangle Norman Reid, 2021-01-18

Chemistry is often seen as a difficult subject to understand This book focusses on the triangle model that Alex H Johnstone developed in the early 1980s Originally conceived in the context of making chemistry more accessible to a wider range of learners the model has been applied in almost every area of education in chemistry at all stages of learning In looking at why chemistry is difficult there are two central questions Firstly does the problem relate to the nature of chemistry and secondly does it relate to the way humans gain understanding Both were found to be important and the answers to the two questions were found to be connected The triangle model arose from sustained research into human learning The central finding from research is the critical role of working memory and the model rationalises so much evidence from chemistry education research as well as the repeated experiences of teachers of chemistry at all levels In order to understand chemistry it is essential to develop sound mental models of molecular reality It generates major implications for the way a chemistry curriculum should be constructed and the processes of teaching and learning in chemistry when the goal is focussed on understanding the key ideas Some of these implications are developed and pointers offered to more successful ways forward The power of the Johnstone Triangle lies in the way it offers clear

directions for all involved in chemistry education It is hoped that this book will prove helpful to all involved in sharing the exciting story of the way humans have come to understand the molecular world one of the great examples of great human endeavour
