Identity, Oppression, and Diversity

in Archaeology Laura E. Heath-Stout, 2024-10-31 Identity Oppression and Diversity in Archaeology documents how racism classism sexism heterosexism and ableism affect the demographics of archaeology and discusses how knowledge that archaeologists produce is shaped by the discipline's demographic homogeneity Previous research has shown that like many academic fields archaeology is numerically dominated by straight white cisgender people and those in positions of authority are predominantly men This book examines how and why those demographic trends persist It also elucidates how individual archaeologists' social identities shape the research they conduct and therefore how our demographics affect and limit our knowledge production on a disciplinary scale It explains how through unflinching reflection proactive policymaking and sincere community building we can build a diverse and inclusive discipline This book will appeal to archaeologists who have an interest in diversity and inclusion within the discipline as well as scholars in other disciplines who are engaged in research on diversity in academia

To Halt Or Not To Halt? That Is The Question Cristian S Calude, 2024-03-20 This is a book about the Halting Problem arguably the most famous computer related problem can an algorithm decide in finite time whether an arbitrary computer program eventually stops This seems a dull petty question after all you run the program and wait till it stops However what if the program does not stop in a reasonable time a week a year or a decade Can you infer that it will never stop The answer is negative Does this raise your interest If not consider these questions Can mathematics be done by computers only Can software testing be fully automated Can you write an anti virus program which never needs any updates Can we make the Internet perfectly secure Your guess is correct the answer to each question is negative The Halting Problem is hidden in many subjects from logic is mathematics free of contradictions physics is quantum randomness perfect to philosophy do humans have free will or do our brains generate our thoughts and decisions in a deterministic way and quantum computing why we don't have a quantum Halting Problem this book will visit each of them Written in an informal and thought provoking language supported with suggestive illustrations and applications and almost free of arcane mathematics formal arguments are relegated to particular parts dedicated to the mathematically oriented reader the book will stimulate the curiosity and participation of the reader interested in the consequences of the limits of computing and in various attempts to cope with them
