

Section A: Pure Mathematics [40 marks]

1. A curve C has parametric equations

$$x = t^3 - 12t, \quad y = t - 2 \quad \text{for } t \leq 2.$$

- (i) Sketch C , labelling the coordinates of any end points. [2]

A line l has equation $y = m(x + 16)$, where m is positive. It is given that l intersects C at the points where $t = 2$ and $t = k$, where $k \leq -4$.

- (ii) Show that the area of the region bounded by C and l is $6k^3 - \frac{k^4}{4} - 16k + 12 + \frac{(k-2)^2}{2m}$. [5]

2. An Art teacher teaches her students to create patterns using squares of different sizes. One possible pattern is to begin with the first square with sides of length 2 mm. The first square is inscribed in the second square, where the corners of the first square coincide with the midpoints of the second square. She continues inscribing squares in this manner where the n^{th} square is inscribed in the $(n+1)^{\text{th}}$ square. **Figure 1** shows a piece of artwork after 4 squares are drawn.

Figure 1

By using this pattern, Student A begins his artwork

- (i) Find, in terms of n , the length of the sides of the n^{th} square. [2]
 (ii) A standard A4 paper measures 210 mm by 297 mm. Find the maximum number of complete squares that he can draw on the paper. [2]

Student B uses a giant drawing board and decides to make his artwork more eye-catching. He uses the same pattern and measurements as Student A, but he shades the 1st square and also shades on any protruding areas covered by the 4th, 7th, ..., $(3N+1)^{\text{th}}$ squares, where N is a non-negative integer. A protruding area is defined by the region bounded by the newly drawn square and the square immediately preceding it. **Figure 2** shows a piece of artwork if he draws 4 squares.

Figure 2

- (iii) Find, in mm^2 , the total shaded area as shown in **Figure 2**. [2]
 (iv) Hence or otherwise, find the total shaded area if he draws 30 squares. Give your answer in m^2 . [3]

Over, 2016-08-12 In the study of human thinking two main research questions can be asked Descriptive Q What is human thinking like Normative Q What ought human thinking be like For decades these two questions have dominated the field and the relationship between them generated many a controversy Empirical normativist approaches regard the answers to these questions as positively correlated in essence human thinking is what it ought to be although what counts as the ought standard is moot In contemporary theories of reasoning and decision making this is often associated with a Panglossian framework an adaptationist approach which regards human thinking as a priori rational In contrast prescriptive normativism sees the answers to these two questions as negatively correlated Normative models are still relevant to human thought but human behaviour deviates from them quite markedly with the invited conclusion that humans are often irrational Prescriptive normativism often results in a Meliorist agenda which sees rationality as amenable to education Both empirical and prescriptive normativism can be contrasted with a descriptivist framework for psychology of human thinking Following Hume's strict divide between the is and the ought descriptivism regards the descriptive and normative research questions as uncorrelated or dissociated with only the former question suitable for psychological study of human behaviour This basic division carries over to the relation between normative ought rationality based on conforming to normative standards and instrumental rationality based on achieving one's goals Descriptivist approaches regard the two as dissociated whereas normativist approaches tend to see them as closely linked with normative arguments defining and justifying instrumental rationality This research topic brings together diverse contributions to the continuing debate Featuring contributions from
