

## How to Create a Chromosome Map from Crossover Frequencies

**Recombination:** During crossing-over (prophase I of Meiosis), genes on chromosomes switch places. Crossover is random, but the likelihood that 2 genes crossover will increase if those genes are farther apart. Genes closer together are more likely to "stick together" and not switch places.

**Gene Linkage Maps:** Using the crossover frequencies, you can construct a map to represent the distances between genes.

This map shows chromosome #2 of *Drosophila melanogaster*. The distance between the genes can be written as a percentage or as a MAP UNIT. The gene for body color and wing size are 17 map units apart.

**Sample Problem:**

Given the crossover frequency of each of the genes on the chart, construct a chromosome map.

| Gene | Frequency of Crossover |
|------|------------------------|
| A-C  | 30%                    |
| B-C  | 45%                    |
| B-D  | 40%                    |
| A-D  | 25%                    |

**Step 1:** Start with the genes that are the farthest apart first: B and C are 45 map units apart and would be placed far apart.

B ..... 45% ..... C

**Step 2:** Solve it like a puzzle, using a pencil to determine the positions of the other genes.

**Step 3:** Subtraction will be necessary to determine the final distances between each gene.
