refers to its involvement at a strategic level within the retail company where it can influence the conditions of retail internationalisation. When logistics is involved more proactively its operations can become better aligned with the other company operations involved in retail internationalisation. Furthermore proactive logistics support enables more efficient and effective logistics that can better cope with increased complexity as well as more effectively keeping track of logistics costs. In addition to these findings the importance of top management has been identified as a key aspect of proactive logistics support. More specifically logistics competence within the top management team enables logistics to be prioritised at a strategic level and to be better integrated during retail internationalisation including during individual establishments into new markets. The findings also suggest that the importance of logistics increases over time during retail internationalisation. The more markets the retailer enters the more important efficient logistics becomes in order to deal with both complexity and logistics costs. By involving proactive logistics from the start of retail internationalisation retail chains can more efficiently and effectively establish into and operate within foreign sales markets which in turn supports a sustainable retail internationalisation. One of the main academic contributions of this licentiate thesis has been to study logistics in the specific context of retail internationalisation which has previously not been researched in any great detail. In addition logistics has often been studied as a static aspect but in this thesis it is studied from a dynamic perspective in order to understand how its supporting role changes over time during the early stage of retail internationalisation. Another important contribution is that the role of logistics has been studied from both a strategic and an operational level as previous research has mostly focused on the strategic level of logistics related to retail internationalisation. In terms of practical contributions this licentiate thesis clarifies the logistics characteristics and supply chain capabilities that support the early stage of retail internationalisation. This licentiate thesis can also help practitioners to better prepare their logistics organisation and logistics operations for a future retail internationalisation as well as helping them to avoid making logistical mistakes during the early stage of retail internationalisation.

Exploring Third-Party Logistics and Partnering in Construction Andreas Ekeskär, 2016-06-01. The construction industry is associated with problems such as low productivity and high costs. This has been highlighted in several government funded reports in both Sweden and in the UK during the course of over two decades. The construction industry is a large industry sector employing hundreds of thousands and a large contributor to a country's GDP. The problems therefore have a large impact on society. Some of the problems are rooted in the organizational structure of the construction industry. Compared to other manufacturing industries the construction industry is organized in temporary organizations. The temporary organizations

cause temporary supply chains fragmentation among construction industry actors and adversarial relationships between those actors Partnering has been put forward as a solution to overcome the temporariness and the adversarial relationships in the construction industry Another solution to mitigate the problems suggested in the reports is supply chain management SCM Both concepts have been taken from the manufacturing industries and partnering has been more successful compared to SCM in the construction industry In the construction industry the progress towards SCM has focused on logistics In recent years dedicated third party logistics TPL solutions have emerged in the Swedish construction industry where a company is hired to manage the logistics in a construction project The purpose with the research presented in this licentiate thesis is to explore how client initiated TPL solutions and partnering can be facilitators for SCM in the construction industry Being a new phenomenon in the construction industry TPL solutions provide a logistical competence not necessarily included in a traditional construction project Therefore TPL solutions are of particular interest when studying the realization of SCM in the construction industry In the process of realizing SCM in the construction industry the construction clients have been put forward as having a crucial and important role The clients are the initiator and funder of construction projects and as such the client can influence the course of a construction project Therefore it is of interest to study how the client can take an active role in this process Initiating a TPL solution in a construction project is one way for a client to take an active part in the realization of SCM in construction However in order to study how clients can take an active role towards the realization of SCM in the construction industry there have to be an understanding of how SCM is to be adopted to the construction industry context SCM that derives from the manufacturing industry is designed to be used in long term relationships with permanent organizational structures The construction industry on the other hand is associated with short term relationships and a temporary organizational structure Partnering that is designed to mitigate the temporariness and establish long term relationships have been quite successful in the construction industry and could therefore be used as a facilitator for SCM in construction To study the use of client initiated TPL solutions in construction and the realization of SCM in the construction industry the following research questions have been addressed RQ1 To what extent can a third party logistics solution be a facilitator for client driven SCM in the construction industry RQ2 How will upstream and downstream tiers be affected when a thirdparty logistics provider is used in a construction project RQ3 How can partnering be used as a mean to facilitate the realization of SCM in the construction industry To answer the research questions two main methodologies have been used case study for the empirically grounded research and conceptual studies for the analysis of the case studies as well as for comparing the two concepts of partnering and SCM All questions have been grounded in literature and previous research The findings of this research is therefore grounded in both theory and in practice The main findings of this research is that TPL solutions are not a quick fix for realizing SCM in the construction industry However if used right a TPL solution can be an effective tool to address logistical issues in a construction project and to establish an interface between the supply chain

and the construction site By initiating a TPL solution the client addresses the importance of logistical competence in a construction project A TPL solution does not have a purpose of its own a TPL solution is a service function to the construction project providing expertise on logistics management There are also a number of driving forces and concerns that have been identified if they are addressed prior to a TPL solution is implemented the likelihood of its success will increase Furthermore both partnering and SCM rely on high trust and share several key components and issues that have to be addressed Partnering on strategic level with several suppliers included can even be hard to distinguish from SCM Wherefore partnering is considered a facilitator for the realization of SCM in construction By addressing the necessary issues in both concepts a good foundation for SCM is established English Language and Literature for the IB Diploma Brad Philpot, 2011-07-14 For students studying the new Language A Language and Literature syllabus for the IB Diploma Written by an experienced practising IB English teacher this new title is an in depth and accessible guide for Standard and Higher Level students of the new Language A Language and Literature syllabus for the IB Diploma This lively well structured coursebook is available in both print and e book formats and includes key concepts in studying language and literature text extracts from World literature in English and in translation international media and language sources a wide variety of activities to build skills materials for exam preparation guidance on assessment Theory of Knowledge links and Extended essay opportunities

web mar 27 2017 this chapter focuses on nuclear reactions that occur between a projectile and a target in a nuclear reaction moderated by the strong force in contrast to the weak force there is conservation of the number of protons and neutrons and thus the number of nucleons thus the total number of neutrons protons on the left and right sides of the

nuclear reaction definition types examples with equations - Feb 27 2022

web nuclear reactions are processes in which one or more nuclides are produced from the collisions between two atomic nuclei or one atomic nucleus and a subatomic particle the nuclides produced from nuclear reactions are different from the reacting nuclei commonly referred to as the parent nuclei

nuclear interactions and classes of nuclear reaction - May 01 2022

web nov 21 2019 with their help we can study the properties of nuclei obtain and investigate exotic nuclear states highly excited rapidly rotating etc and nuclei at the drip lines proton and neutron rich synthesize superheavy nuclei including new chemical elements explore nuclear reactions mechanisms and so on

nuclear reactions springerlink - Jun 02 2022

web jan 24 2023 in the present chapter we will discuss the basic foundations and experimental techniques for the investigation of nuclear reaction in the middle energy range where nuclei are excited or split nuclear fission are converted into other nuclei or fused to larger nuclei nuclear fusion

chapter 10 nuclear and chemical reactions chemistry libretexts - May 13 2023

web 10 1 nuclear radiation nuclear reactions are very different from chemical reactions in chemical reactions atoms become more stable by participating in a transfer of electrons or by sharing electrons with other atoms in nuclear reactions it is the nucleus of the atom that gains stability by undergoing a change of some kind
