If geologists can determine which way was originally "up" in a stack of layers, they can put those strata in the correct historical order. Rarely, after a sequence of layers has been deposited and compressed to form rock, it may be literally overturned by the thrusting of the Earth's crust as continental plates collide. In rare cases like this, how can the original sequence of the rocks be determined?

- A. Collect samples in near-by undisrupted areas.
- B. They cannot be determined.
- C. Carbon-date the fossils that are formed within the sedimentary rock layers.
- D. They are totally in the reverse order of oldest to youngest.
