

Questions 5–7 refer to the following material.

Figure 1

Figure 2

Note: Figures not drawn to scale.

The figures above show a small block of mass 0.20 kg on a track in the shape of a circular arc. The block is released from rest at a height H above the floor, as shown in Figure 1. The block slides along the track with negligible friction and leaves it at a height of 0.40 m above the floor and a speed of 3.0 m/s at a 30° angle, as shown in Figure 2.

5. The height H is most nearly
- (A) 0.45 m
 - (B) 0.51 m
 - (C) 0.86 m
 - (D) 1.7 m
6. The magnitude of the gravitational force exerted on the block is F_g , and the magnitude of the normal force exerted by the track on the block is F_n . Which of the following correctly compares the magnitudes of these two forces when the block is at the lowest point on the track?
- (A) $F_n > F_g$
 - (B) $F_n = F_g$
 - (C) $F_n < F_g$
 - (D) The magnitudes cannot be compared without knowing the radius of the arc of the track.
7. After the block leaves the track, what is the block's speed when it reaches the highest point of its motion?
- (A) 0
 - (B) 1.5 m/s
 - (C) 2.6 m/s
 - (D) 3.0 m/s

19th Natural Philosophy Alliance Proceedings Greg Volk, 2012-07-14 The Natural Philosophy Alliance NPA sponsors regular international conferences for presenting high quality papers discussing aspects of philosophy in the sciences Many papers offer challenges to accepted orthodoxy in the sciences especially in physics Everything from the micro physics of quantum mechanics to the macro physics of cosmology is entertained Though the main interest of the NPA is in challenging orthodoxy in the sciences it will also feature papers defending such orthodoxy Our ultimate propose is to enable participants to articulate their own understanding of the truth All papers are reviewed by society officers and sometimes by other members before presentation in conferences and they are edit sometimes very significantly prior to publication in the Proceedings of the NPA

Biomineralization Sourcebook Elaine DiMasi, Laurie B. Gower, 2014-02-25 What does it mean to be at the forefront of a characterization technique Novel implementation and research finding new ways to visualize composites and new techniques all play a role Yet with the myriad of advances in the field keeping up with new and advanced techniques often from many different areas has become a challenge

Biomineralization Sourcebook Characterization of Biominerals and Biomimetic Materials emphasizes the interplay between multiple techniques at their current frontiers and explores how such studies may be carried out The book addresses atomic and molecular structure how it is described detected and assessed for importance It then highlights additional measurements especially well suited to looking at two and three dimensional systems with heterogeneous if not hierarchical structure These systems enable particular aspects of biominerals and biomimetic models to be scrutinized The text presents state of the art methods to assess properties of the composite and represents current approaches and aspirations to measuring entire biological working structures while retaining as much fine grained biophysical information as possible In all these chapters authors showcase discoveries from their own programs Along the way the book takes you on a tour from microscopy s eighteenth century roots to the recent literature and diverse research programs of the contributing investigators to the multi

million dollar National Laboratory facilities that all play their roles to illuminate the ever fascinating biominerals A snapshot of the state of the art in a spectrum of experimental techniques applied to a common interdisciplinary goal where the ability to use the more advanced techniques often requires funding for collaboration and travel the book will deepen the appreciation for the massive interdisciplinary effort underway educate researchers across the field and motivate new collaborations

Executive Thinking Kevin Baize OD, Morris Graham PhD, 2011-02-18 Life is about how much we think Thinking is about how much mental capacity we possess Capacity in addition to our abilities and conscientiousness is about how much we can process combinations of verbal height quantitative width and spatial depth with decisiveness direction and speed No matter where we go or what we do as executives we take our thinking with us That may spoil everything because to a great extent we do and accomplish what we think about Our thoughts mold our aspirations attitudes and accomplishments during our life In other words our careers and lives are influenced more by the power of our thoughts than anything else The bad news is that most of us never fully use our mental capacities and never achieve our potential The good news is that neural technologies are now available to transform our thinking into the higher realms of brilliance Developing the spatial capacity to think higher wider and deeper means breaking away from the effects of years of flat thinking or educational backgrounds that stifles creative innovative potential Expand your mental agility through a development of higher order processes and discover a whole new world mentally in Executive Thinking
